math playground unblocked: The Biggest Bluff Maria Konnikova, 2020-06-23 A New York Times bestseller • A New York Times Notable Book "The tale of how Konnikova followed a story about poker players and wound up becoming a story herself will have you riveted, first as you learn about her big winnings, and then as she conveys the lessons she learned both about human nature and herself." —The Washington Post It's true that Maria Konnikova had never actually played poker before and didn't even know the rules when she approached Erik Seidel, Poker Hall of Fame inductee and winner of tens of millions of dollars in earnings, and convinced him to be her mentor. But she knew her man: a famously thoughtful and broad-minded player, he was intrigued by her pitch that she wasn't interested in making money so much as learning about life. She had faced a stretch of personal bad luck, and her reflections on the role of chance had led her to a giant of game theory, who pointed her to poker as the ultimate master class in learning to distinguish between what can be controlled and what can't. And she certainly brought something to the table, including a Ph.D. in psychology and an acclaimed and growing body of work on human behavior and how to hack it. So Seidel was in, and soon she was down the rabbit hole with him, into the wild, fiercely competitive, overwhelmingly masculine world of high-stakes Texas Hold'em, their initial end point the following year's World Series of Poker. But then something extraordinary happened. Under Seidel's guidance, Konnikova did have many epiphanies about life that derived from her new pursuit, including how to better read, not just her opponents but far more importantly herself; how to identify what tilted her into an emotional state that got in the way of good decisions; and how to get to a place where she could accept luck for what it was, and what it wasn't. But she also began to win. And win. In a little over a year, she began making earnest money from tournaments, ultimately totaling hundreds of thousands of dollars. She won a major title, got a sponsor, and got used to being on television, and to headlines like How one writer's book deal turned her into a professional poker player. She even learned to like Las Vegas. But in the end, Maria Konnikova is a writer and student of human behavior, and ultimately the point was to render her incredible journey into a container for its invaluable lessons. The biggest bluff of all, she learned, is that skill is enough. Bad cards will come our way, but keeping our focus on how we play them and not on the outcome will keep us moving through many a dark patch, until the luck once again breaks our way.

math playground unblocked: *The Human Religion and Spirituality* Valentin Matcas, 2016-04-20 Is there a difference between religion and spirituality? Yes, certainly, yet when you study it closely, you find it similar to the difference between all religions, all spiritual schools of thought, and all ideologies in general. But are religion and spirituality ideologies? Are they only sets of beliefs, or they contain higher knowledge, even in an equal amount? There is a continuous debate in this area, as what religion is true or what spiritual school of thought is better, or if it is better to be part of a religion or a school of thought. Yet what we seek throughout this study is to avoid all debates, only to be able to find all answers from a comprehensive perspective. What is religion? What is spirituality? What is the difference between religion and spirituality? And what exactly is meaningful to consider in both religion and spirituality from a higher perspective? It is important to

form a cognitive model capable to sustain both religion and spirituality in a single study and explanation, and this is exactly what this book does. Yet it feels impossible, since there is no other study to have ever succeeded in finding the ultimate explanation, the ultimate higher truth in this world, and to do so from a rigorous, comprehensive perspective. Or if there was, then you could finally see the end of all religious debates, conflicts, discrimination, and holy wars. Yet holy wars have material, social, and national interests many times, and cannot hold higher meaning. But what exactly stops you from understanding religion and spirituality for what they truly are? Are there specific beliefs in this world or in any ideology condemning religion, spirituality, or both? And if you could ever be able to approach and understand religion and spirituality in one cognitive model, how would you structure it, and what ultimate truth would you expect to learn? Is this even possible, for humans, through the human nature, with the human status, and through the human development, to accomplish a cognitive model for religion and spirituality? Are humans even allowed to do so, to think freely, and to use their reasoning in order to understand religion and spirituality? Wasn't this how the famous first couple got in trouble, by attempting to distinguish between good and evil on their own, in order to gain their own authority, control, management, and therefore freedom? And yet, isn't freedom the most treasured human achievement? Throughout this book, we model the human condition, meaning, and experience here and in the wider world, explaining everything related to your wider existence, higher self, and higher meaning in life and in the wider world, in order to achieve a true understanding, a spiritual pathway, and a harmonious development and fulfillment in life and in the wider world.
