new spain map 1794: Political Essay on the Kingdom of New Spain, Volume 1 Alexander von Humboldt, 2020-03-27 Volume 1 of this critical edition includes a note on the text from the Humboldt in English team, an introduction by editors Vera M. Kutzinski and Ottmar Ette, a preface to the first edition by Alexander von Humboldt, and the translation of Volumes 1 and 2 of Humboldt's *Essai politique sur le royaume de de Nouvelle Espagne* from 1825 to 1827. Alexander von Humboldt was the most celebrated modern chronicler of North and South America and the Caribbean, and this translation of his essay on New Spain—the first modern regional economic and political geography—covers his travels across today's Mexico in 1803–1804. The work canvases natural-scientific and cultural-scientific objects alike, combining the results of fieldwork with archival research and expert testimony. To show how people, plants, animals, goods, and ideas moved across the globe, Humboldt wrote in a variety of styles, bending and reshaping familiar writerly conventions to keep readers attentive to new inputs. Above all, he wanted his readers to be open-minded when confronted with cultural and other differences in the Americas. Fueled by his comparative global perspective on politics, economics, and science, he used his writing to support Latin American independence and condemn slavery and other forms of colonial exploitation. It is these voluminous and innovative writings on the New World that made Humboldt the undisputed father of modern geography, early American studies, transatlantic cultural history, and environmental studies. This two-volume critical edition—the third installment in the Alexander von Humboldt in English series—is based on the full text, including all footnotes, tables, and maps, of the second, revised French edition of *Essai politique sur le royaume de de Nouvelle Espagne* from 1825 to 1827, which has never been translated into English before. Extensive annotations and full-color atlases are available on the series website.

new spain map 1794: The Fear of French Negroes Sara E. Johnson, 2012-10-10 The Fear of French Negroes is an interdisciplinary study that explores how people of African descent responded to the collapse and reconsolidation of colonial life in the aftermath of the Haitian Revolution (1791-1845). Using visual culture, popular music and dance, periodical literature, historical memoirs, and state papers, Sara E. Johnson examines the migration of people, ideas, and practices across imperial boundaries. Building on previous scholarship on black internationalism, she traces expressions of both aesthetic and experiential transcolonial black politics across the Caribbean world, including Hispaniola, Louisiana and the Gulf South, Jamaica, and Cuba. Johnson examines the lives and work of figures as diverse as armed black soldiers and privateers, female performers, and newspaper editors to argue for the existence of competing inter-Americanisms as she uncovers the struggle for unity amidst the realities of class, territorial, and linguistic diversity. These stories move beyond a consideration of the well-documented anxiety insurgent blacks occasioned in slaveholding systems to refocus attention on the wide variety of strategic alliances they generated in their quests for freedom, equality and profit.

new spain map 1794: [Gardens of New Spain](#) William W. Dunmire, 2012-08-17 When the Spanish began colonizing the Americas in the late fifteenth and sixteenth centuries, they brought with them the plants and foods of their homeland—wheat, melons, grapes, vegetables, and every kind of Mediterranean fruit. Missionaries and colonists introduced these plants to the native peoples of Mexico and the American Southwest, where they became staple crops alongside the corn, beans, and squash that had traditionally sustained the original Americans. This intermingling of Old and New World plants and foods was one of the most significant fusions in the history of international cuisine and gave rise to many of the foods that we so enjoy today. [Gardens of New Spain](#) tells the fascinating story of the diffusion of plants, gardens, agriculture, and cuisine from late medieval Spain to the colonial frontier of Hispanic America. Beginning in the Old World, William Dunmire describes how Spain came to adopt plants and their foods from the Fertile Crescent, Asia, and Africa. Crossing the Atlantic, he first examines the agricultural scene of Pre-Columbian Mexico and the Southwest. Then he traces the spread of plants and foods introduced from the Mediterranean to Spain's settlements in Mexico, New Mexico, Arizona, Texas, and California. In lively prose, Dunmire tells stories of the settlers, missionaries, and natives who blended their growing and eating practices into regional plantways and cuisines that live on today in every corner of America.

new spain map 1794: [Imagining Identity in New Spain](#) Magali M. Carrera, 2010-01-01 Using an interdisciplinary approach that also considers legal, literary, and religious documents of the period, Magali Carrera focuses on eighteenth-century portraiture and casta paintings to understand how the people and spaces of New Spain were conceptualized and visualized. Winner, Book Award, Association of Latin American Art, 2004 Reacting to the rising numbers of mixed-blood (Spanish-Indian-Black African) people in its New Spain colony, the eighteenth-century Bourbon government of Spain attempted to categorize and control its colonial subjects through increasing social regulation of their bodies and the spaces they inhabited. The discourse of *calidad* (status) and *raza* (lineage) on which the regulations were based also found expression in the visual culture of New Spain, particularly in the unique genre of casta paintings, which purported to portray discrete categories of mixed-blood plebeians. Using an interdisciplinary approach that also considers legal, literary, and religious documents of the period, Magali Carrera focuses on eighteenth-century portraiture and casta paintings to understand how the people and spaces of New Spain were conceptualized and visualized. She explains how these visual practices emphasized a seeming realism that constructed colonial bodies—elite and non-elite—as knowable and visible. At the same time, however, she argues that the chaotic specificity of the lives and lived conditions in eighteenth-century New Spain belied the illusion of social orderliness and totality narrated in its visual art. Ultimately, she concludes, the inherent ambiguity of the colonial body and its spaces brought chaos to all dreams of order.
