plagiarism detection iu: Analyzing Non-Textual Content Elements to Detect Academic Plagiarism Norman Meuschke, 2023-07-31 Identifying plagiarism is a pressing problem for research institutions, publishers, and funding bodies. Current detection methods focus on textual analysis and find copied, moderately reworded, or translated content. However, detecting more subtle forms of plagiarism, including strong paraphrasing, sense-for-sense translations, or the reuse of non-textual content and ideas, remains a challenge. This book presents a novel approach to address this problem—analyzing non-textual elements in academic documents, such as citations, images, and mathematical content. The proposed detection techniques are validated in five evaluations using confirmed plagiarism cases and exploratory searches for new instances. The results show that non-textual elements contain much semantic information, are language-independent, and resilient to

typical tactics for concealing plagiarism. Incorporating non-textual content analysis complements text-based detection approaches and increases the detection effectiveness, particularly for disguised forms of plagiarism. The book introduces the first integrated plagiarism detection system that combines citation, image, math, and text similarity analysis. Its user interface features visual aids that significantly reduce the time and effort users must invest in examining content similarity.

plagiarism detection iu: Teaching and Learning at a Distance Michael Simonson, Susan Zvacek, 2024-01-01 Teaching and Learning at a Distance is written for introductory distance education courses for preservice or in-service teachers, and for training programs that discuss teaching distant learners or managing distance education systems. This text provides readers with the basic information needed to be knowledgeable distance educators and leaders of distance education programs. The teacher or trainer who uses this book will be able to design courses, evaluate programs, and identify issues and trends affecting the field. In this text we take the following themes: The first theme is the definition of distance education. Before we started writing the first edition of Teaching and Learning at a Distance we carefully reviewed the literature to determine the definition that would be at the foundation of our writing. This definition is based on the work of Desmond Keegan, but is unique to this book and has been adopted by the Association for Educational Communications and Technology and by the Encyclopedia Britannica. The second theme of the book is the importance of research to the development of effective courses and programs offered at a distance. The best practices presented in Teaching and Learning at a Distance are validated by scientific evidence. Certainly there are "rules of thumb," but we have always attempted to only include recommendations that can be supported by research. The third theme of Teaching and Learning at a Distance is derived from Richard Clark's famous quote published in the Review of Educational Research asserting that media are mere vehicles that do not directly influence achievement. Clark's controversial work is discussed in the book, but is also fundamental to the book's advocacy for distance education—in other words, we authors do not make the claim that education delivered at a distance is inherently better than other ways people learn. Distance delivered instruction is not a magical approach that makes learners achieve more. Equivalency

theory is the fourth theme of the book. Here we present the concept that instruction should be provided to learners that is equivalent rather than identical to what might be delivered in a traditional environment. Equivalency theory helps the instructional designer approach the development of instruction for each learner without attempting to duplicate what happens in a face-to-face classroom. The final theme for Teaching and Learning at a Distance is the idea that the book should be comprehensive—that it should cover as much of the various ways instruction is made available to distant learners as is possible. It can serve as a stand-alone source of information.

plagiarism detection iu: Correcting the Scholarly Record for Research Integrity M. V. Dougherty, 2018-11-09 This volume is the first book-length study on post-publication responses to academic plagiarism in humanities disciplines. It demonstrates that the correction of the scholarly literature for plagiarism is not a task for editors and publishers alone; each member of the research community has an indispensable role in maintaining the integrity of the published literature in the aftermath of plagiarism. If untreated, academic plagiarism damages the integrity of the scholarly record, corrupts the surrounding academic enterprise, and creates inefficiencies across all levels of knowledge production. By providing case studies from the field of philosophy and related disciplines, the volume exhibits that current post-publication responses to academic plagiarism are insufficient. It catalogues how humanities disciplines fall short in comparison with the natural and biomedical sciences for ensuring the integrity of the body of published research. This volume provides clarity about how to conceptualize the scholarly record, surveys the traditional methods for correcting it, and argues for new interventions to improve the reliability of the body of published research. The book is valuable not only to those in the field of philosophy and other humanities disciplines, but also to those interested in research ethics, meta-science, and the sociology of research.

plagiarism detection iu: The Oxford Guide for Writing Tutors Melissa Ianetta, Lauren Fitzgerald, 2016 The Oxford Guide for Writing Tutors introduces two conversations to the tutor's preparation, one about the creation of knowledge in writing programs, the other about tutor research. This approach to tutor training provides several benefits. First, it allows tutors to test their theories of what might work in a writing center session and helps them to move professional conversation towards why such things happen. They bridge the theory-practice divide that often frustrates both novices and experienced tutors. By conducting research to answer such questions, tutors can help themselves, the writers with whom they work, their fellow tutors - and the writers with whom they work. And, further, this approach gives the reader new methods for appreciating and critiquing scholarly work, making it easier to understand the best ways to help writers and to move the field forward. As writing tutoring programs take on a variety of forms and pursue a range of missions, this book aims to create a flexible text whose contents can be easily rearranged to support a broad spectrum of reader needs. Each chapter, accordingly, can be read independently; the text does not rely on a sequential reading to create meaning. The book also includes intra-textual and extra-textual references for the reader who wants to inquire further. That is, throughout the book are references to material in other chapters that might be of interest to the reader intrigued by the topic at hand. So too, in each chapter, we include references to and citations of the scholarship that supports much of the common knowledge of the field, including, in the Handbook, both previous tutor education textbooks and research from the field. The aim is to aid the interested reader's inquiry into the scholarship of the field as well as to ground advice about practice in research that testifies to the effectiveness a range of tutoring practices. Much of the scholarship cited throughout the book is authored by undergraduate tutor-researchers as well as several former tutors who were graduate students when they published their articles. This crucial aspect best models the ways in which tutors themselves can bring together practice and research, in their day-to-day work and in their informed thinking about this work. Including tutor voices is an important tradition of the tutor education textbook because these are voices that speak to the issues concerning tutors in a range of

institutions and programs across the country.

plagiarism detection iu: Pluralizing Plagiarism Rebecca Moore Howard, Amy E. Robillard, 2008 The recent cases of Doris Kearns Goodwin and Kaavya Viswanathan demonstrate that plagiarism is a hot-button issue. It is also pervasive, occurring in universities, four-year colleges, community colleges, and secondary schools. In graduate programs, international classrooms, and multicultural classrooms. In writing centers and writing-across-the-curriculum programs. In scholarly publications and the popular media. How do we understand a literacy practice that is simultaneously so abhorred and so present in the lives of both beginning and advanced writers, students, and Pulitzer Prize winners? *Pluralizing Plagiarism* offers multiple answers to this question - answers that insist on taking into account the rhetorical situations in which plagiarism occurs. While most scholarly publications on plagiarism mirror mass media's attempts to reduce the issue to simple black-and-white statements, the contributors to *Pluralizing Plagiarism* recognize that it takes place not in universalized realms of good and bad, but in specific contexts in which students' cultural backgrounds often play a role. Teachers concerned about plagiarism can best address the issue in the classroom - especially the first-year composition classroom - as part of writing pedagogy and not just as a matter for punishment and prohibition. *Pluralizing Plagiarism* opens a productive dialogue about what is at stake in plagiarism - one that approaches the topic with students rather than for or about them. Leading the way toward curricular reform, its contributors take student work seriously and, therefore, encourage teachers to take student writing and learning seriously.
