relias training modules: Adolescents with Autism Spectrum Disorder Nicholas W. Gelbar, 2017-11-22 Adolescence is a challenging stage for all individuals, especially for those with Autism Spectrum Disorder (ASD). Individuals with ASD face increased social isolation and engage in more challenging behaviors during adolescence. They also experience increased mental health challenges including anxiety and depression, and they are among the least likely of any disability group to attend college, be competitively employed, or live independently. At the same time, adolescents with ASD face a major shift in available services and support as they exit the K-12 educational system. The need to present what is known about this group in order to inform clinicians, researchers, and educators cannot be understated. Adolescents with Autism Spectrum Disorder synthesizes current science on adolescents and young adults with ASD in order to inform mental health practitioners and education professionals who work directly with these individuals. While early childhood interventions for ASD have been extensively developed and tested, research on adolescents and young adults with ASD has lagged behind until recently. This comprehensive handbook can be utilized to train students and professionals in applied mental health roles. The handbook includes three sections: Part I reviews diagnosis and treatment of adolescents with ASD; Part II details how to support their educational needs; and Part III discusses special populations including college students and young women. Chapters highlight recommendations for clinicians and include study questions and additional resources.

relias training modules: The Autism Industrial Complex Alicia A. Broderick, 2022-01-12 A 2023 SPE Outstanding Book Award Winner Autism—a concept that barely existed 75 years ago—currently feeds multiple, multi-billion-dollar-a-year, global industries. In The Autism Industrial Complex: How Branding, Marketing, and Capital Investment Turned Autism into Big Business, Alicia A. Broderick analyzes how we got from the 11 children first identified by Leo Kanner in 1943 as

“autistic” to the billion-dollar autism industries that are booming today. Broderick argues that, within the Autism Industrial Complex (AIC), almost anyone can capitalize on—and profit from—autism, and she also shows us how. The AIC has not always been there: it was built, conjured, created, manufactured, produced, not out of thin air, but out of ideologies, rhetorics, branding, business plans, policy lobbying, media saturation, capital investment, and the bodies of autistic people. Broderick excavates the 75-year-long history of the concept of autism, and shows us how the AIC—and indeed, autism today—can only be understood within capitalism itself. The Autism Industrial Complex is essential reading for a wide variety of audiences, from autistic activists, to professionals in the autism industries, to educators, to parents, to graduate students in public policy, (special) education, psychology, economics, and rhetoric. relias training modules: Connecting Care for Patients: Interdisciplinary Care Transitions and Collaboration Barbara Katz, 2018-10-29 Connecting Care for Patients: Interdisciplinary Care Transitions and Collaboration addresses practical strategies for creating connected, seamless, and transparent health care for patients in settings outside of the hospital. It presents antidotes to healthcare fragmentation caused by inefficient care, patient safety problems, patient dissatisfaction, and higher costs. The text focuses on clinical case management, interdisciplinary referrals and conferencing, cross functional team meetings, tracking patients in value-based purchasing programs, inpatient liaison visits, structured collaboration with physician groups, and referral sources and development of clinical community networking groups. Further, it explores tools for patient self-management support, effective integration of technology, family caregiver engagement, and techniques for addressing health disparities and other high-risk care gaps.

relias training modules: Spiritual Needs in Research and Practice Arndt Büssing, 2021-05-28 Based on information gathered from the internationally used Spiritual Needs Questionnaire, this book offers analyses of the spiritual and existential needs among different groups of people such as the chronically ill, elderly, adolescents, mothers of sick children, refugees, patients' relatives, and others. The theoretical background, specific empirical findings and the relevance of addressing spiritual needs is discussed by experts from different professions and cultural contexts. Supporting a person's spiritual needs remains an important task of future healthcare systems that wish to more comprehensively care for the healthcare needs of patients, and of religious communities to ensure that spiritual concerns of all persons, independent of their religious orientations, are met in and outside healthcare settings.

relias training modules: Legal and Ethical Issues for Health Professionals with Navigate Advantage Access George D. Pozgar, 2023-03-31 Legal and Ethical Issues for Health Professionals, 6th Edition, has been designed to assist the reader in a more comfortable transition from the didactics of the classroom to the practical application in the workplace. The 6th Edition provides the reader with a clearer understanding of how the law and ethics are intertwined as they relate to health care dilemmas. The 6th Edition, as with previous editions, has been designed to introduce the reader to various ethical-legal issues and should not be considered an in-depth or comprehensive review of a particular ethical-legal issue. The book is a call to arms to do good things, to stand out

from the crowd, because acts of caring, compassion, and kindness often go unnoticed.
