science black bible: *World Religions and the New Era of Science* Janak Singh, 2010-07-22 Since ancient times, the enduring religious concepts of love your fellow being, live truthfully, and do to others what you would like them to do to you have laid the foundations of the laws of civilized human societies. The presence of a supernatural power and its feeling at a personal level has been a source of inspiration and emotional satisfaction for the spiritual believer. The spiritual enhancement reinforced the human mind to achieve greater goodness in the conduct of life. All religions have contributed significantly in shaping humanity, and they continue to do so. World religions have a common spiritual heritage to guide us on the path of a purposeful life of kindness, peace, and harmony in spite of differences in languages, cultures, and historical origins. Science has demystified the awe of natural phenomenon like earthquakes, volcanic eruptions, and violent storms. It has eradicated many ailments and created amenities to facilitate life in numerous ways. It has helped in the religious mission of a happier life. Benefits of science and technology are available to everybody. The geographic barriers have been shrunk for our global township of diverse cultures and faiths. However, science has also produced the menace of thermonuclear and biological weapons capable of global devastations. In this new era of science, religion has a greater role to play for education in universal awakening to purge prejudice and antagonism that trigger conflicts and wars. Religion and science have a new paradigm for humanity: Live and help to live.

Martin, 2020-11-26 *Revelation through Science* is written for the educated non-scientist who may be troubled by apparent conflicts between science and religion. Are science and faith incompatible? Astronomers, physicists, and biologists have now shown that the more deeply science probes nature, the more it reveals evidence pointing us to God. After reviewing concepts from those fields, *Revelation through Science* adds new material from chemistry. It describes organic structures that are profoundly vital for life, yet too complex for self-assembly without some guiding principle. It should lift the burden from believers and seekers to realize that science is not the enemy of faith.

science black bible: *The Science of Religion in Britain, 1860-1915* Marjorie Wheeler-Barclay, 2010-10-21 Marjorie Wheeler-Barclay argues that, although the existence and significance of the science of religion has been barely visible to modern scholars of the Victorian period, it was a subject of lively and extensive debate among nineteenth-century readers and audiences. She shows how an earlier generation of scholars in Victorian Britain attempted to arrive at a dispassionate understanding of the psychological and social meanings of religious beliefs and practices—a topic not without contemporary resonance in a time when so many people feel both empowered and threatened by religious passion—and provides the kind of history she feels has been neglected. Wheeler-Barclay examines the lives and work of six scholars: Friedrich Max Müller, Edward B. Tylor, Andrew Lang, William Robertson Smith, James G. Frazer, and Jane Ellen Harrison. She illuminates their attempts to create a scholarly, non-apologetic study of religion and religions that drew upon several different disciplines, including anthropology, sociology, the classics, and Oriental studies, and relied upon contributions from those outside as well as within the universities. This intellectual enterprise—variously known as comparative religion, the history of religions, or the science of religion—was primarily focused on non-Christian religions. Yet in Wheeler-Barclay's study of the history of this field within the broad contexts of Victorian cultural, intellectual, social, and political history, she traces the links between the emergence of the science of religion to debates about Christianity and to the history of British imperialism, the latter of which made possible the collection of so much of the ethnographic data on which the scholars relied and which legitimized exploration and conquest. Far from promoting an anti-religious or materialistic agenda, the science of religion opened up cultural space for an exploration of religion that was not constricted by the terms of contemporary conflicts over Darwin and the Bible and that made it possible to think in new and more flexible ways about the very definition of religion.

science black bible: *FaithQuestions - What About Religion and Science?* Paul E. Stroble, 2010-09-01 This book invites us to consider ways to remain confident in our faith as we understand and appreciate the discoveries and advances of science. How can Christians integrate, believe, or accept all the teachings of science, the Bible, and Christian tradition? How can we believe in both the discoveries of science and the Bible? Are science and religion compatible or incompatible? Does the Christian understanding that God created the universe exclude the findings and discoveries of

science? What is the role of faith in the world of education? What can we believe about intelligent design? If we believe in evolution, can we believe in God? Does the Big Bang theory exclude God? If we are Christians, can we support stem-cell research and cloning? Can science help us understand the afterlife? Does science negate or support prayer? What is the difference between faith and reason? Do they exclude or complement one another? As Paul Stroble addresses these questions and others, he helps us examine different possible ways that religion and science relate to each other and ways that science and religion provide meaning and value in our lives. PAUL STROBLE is an elder of the Illinois Great Rivers Conference of The United Methodist Church. He has served both as parish pastor and college instructor and currently teaches at the University of Akron, where he earned an Excellence in Teaching award. He is a long-time writer-researcher for the United Methodist curriculum FaithLink and author of numerous articles and curricular materials. Among his eleven books are *Paul and the Galatians* and *What Do Other Faiths Believe?* He is married to Dr. Beth Stroble, and they have a daughter, Emily. The FaithQuestions study series is designed to meet the needs of people who have questions about the Christian faith and who desire a deeper engagement with scripture and with discipleship as they explore studies of issues in theology, ethics, missions, Bible interpretation, and church history. It seeks to equip a new generation of church leaders to appreciate the eternal message of the gospel and to develop the skills to articulate its relevance in our contemporary context. The series would be a good choice for users who have completed Disciple. this will be the ninth study in the series, following *What About the Rapture* - *What Do Other Faiths Believe* - *What Happens When We Die* - *What About Divine Healing* - *What About the Trinity* - *What About Forgiveness* - *What About the Devil* - *What About Reading the Bible*
