They assess each child's motor skills and develop individualized therapy programs designed to enhance physical abilities. Their work often involves collaboration with pediatricians, occupational therapists, and speech therapists to provide comprehensive care.

Philosophy and Approach

The Tecklin approach emphasizes a holistic view of child health, integrating physical, emotional, and social factors into therapy. This approach ensures that therapy sessions are not only effective but also enjoyable for children,

increasing their motivation and participation. The therapists use play-based activities and age-appropriate exercises to facilitate learning and improvement.
