totally science unofficial links: Methodological and Historical Essays in the Natural and Social Sciences Robert S. Cohen, Marx W. Wartofsky, 2012-12-06 Modern philosophy of science has turned out to be a Pandora's box. Once opened, the puzzling monsters appeared: not only was the neat structure of classical physics radically changed, but a variety of broader questions were let loose, bearing on the nature of scientific inquiry and of human knowledge in general. Philosophy of science could not help becoming epistemological and historical, and could no longer avoid metaphysical questions, even when these were posed in disguise. Once the identification of scientific methodology with that of physics had been queried, not only did biology and psychology come under scrutiny as major modes of scientific inquiry, but so too did history and the social sciences - particularly economics, sociology and anthropology. And now, new 'monsters' are emerging - for example, medicine and political science as disciplined inquiries. This raises anew a much older question, namely whether the conception of science is to be distinguished from a wider conception of learning and inquiry? Or is science to be more deeply understood as the most adequate form of learning and inquiry, whose methods reach every domain of rational thought? Is modern science matured reason, or is it simply one historically adapted and limited species of western reason? In our colloquia at Boston University, over the past fourteen years, we have been probing and testing the scope of philosophy of science.

totally science unofficial links: Tourism and Migration C.M. Hall, A.M. Williams, 2013-06-29 The origins of this book lie in a project of the International Geographical Union Study Group on the Geography of Sustainable Tourism. The theme, 'Tourism and migration', reflects the growing interests of tourism geographers - in common with other geographers and social scientists - to reach across traditional cleavages in the way research is undertaken and knowledge is formed. In this instance, the aim was to connect the largely discrete research domains of tourism studies and migration. This was informed not only by awareness of the limitations of disciplinary barriers, but also by the growing need to respond to the emergence of new forms of mobility and circulation, which fitted uncomfortably into many of the analytical categories of tourism and migration studies. The extension of property rights across boundaries (e.g. second homes, vacation homes and time shares), space-time convergence, changing approaches to work and leisure, and structural changes in economies and the demographic profiles of societies are only some of the factors which have generated these new forms of mobility. These serve to bind places and individuals in new and challenging ways with implication for both movers and stayers. The various chapters of this volume bring together a range of dimensions and locations within which to study the relationships between tourism and migration.

totally science unofficial links: British Nuclear Culture Jonathan Hogg, 2016-01-28 The advent of the atomic bomb, the social and cultural impact of nuclear science, and the history of the British nuclear state after 1945 is a complex and contested story. *British Nuclear Culture* is an important survey that offers a new interpretation of the nuclear century by tracing the tensions between 'official' and 'unofficial' nuclear narratives in British culture. In this book, Jonathan Hogg argues that nuclear culture was a pervasive and persistent aspect of British life, particularly in the years following 1945. This idea is illustrated through detailed analysis of various primary source materials, such as newspaper articles, government files, fictional texts, film, music and oral

testimonies. The book introduces unfamiliar sources to students of nuclear and cold war history, and offers in-depth and critical reflections on the expanding historiography in this area of research. Chronologically arranged, *British Nuclear Culture* reflects upon, and returns to, a number of key themes throughout, including nuclear anxiety, government policy, civil defence, 'nukespeak' and nuclear subjectivity, individual experience, protest and resistance, and the influence of the British nuclear state on everyday life. The book contains illustrations, individual case studies, a select bibliography, a timeline, and a list of helpful online resources for students of nuclear history.

This fascinating case study describes the work of the people responsible for creating festive lore and its system of ceremonies and festivities--an inseparable part of every culture. In the case of the new modern Hebrew culture of Eretz Israel (modern Jewish Palestine)--a society of immigrants that left behind most of their traditional folkways--the creation of festival lore was a conscious and organized process guided by a national ideology and aesthetic values. This creative effort in a secular national society served as an alternative to the traditional religious system, adapted the ceremonies and festivals to a new historical reality, and created a new festival cycle that would give expression and joy to the values and symbols of the new Jewish society. *Staging and Stagers in Modern Jewish Palestine* claims that the system of ceremonies and festivals, in general, and each separate ceremony and festival were staged according to the staging instructions written by a defined group of cultural activists. The book examines three main stages--the educational network, rural society (particularly the cooperative sector), and urban society (most notably Tel Aviv)--and looks at the stagers themselves, who were schoolteachers, writers, artists, and cultural activists. Though cultural systems of festivals and ceremonies are often researched and described, scholarly literature rarely identifies their creators or studies in detail the manner in which these systems are created. *Staging and Stagers in Modern Jewish Palestine* sheds important light on the stagers of modern Jewish Palestine and also on the processes and mechanisms that created the performative lore in other cultures, in ancient as well as modern times.

totally science unofficial links: *Evidence of Hope* Paul G. Johnson, 2008-01-01 Social issues shape the news. Yet pulpit and pews maintain an awkward silence about them. One layperson said, I have been a member here for twenty-five years, but I have no idea what any member thinks about any social issue. Op-ed pages and sound bites cause people to wonder if friends are red or blue on social issues, but in this book, content dips below the surface where the water is a bipartisan calm.

Here is one example: for genuine competition to occur, the sides have to be fairly even. We do this in sports, Another example question is, why is health care so high when the healing is free? Hope is implicit in Thy kingdom come...on earth, recited by many churchgoers on a weekly basis as part of the Lord's Prayer. Hope becomes explicit when practical theology and applied sociology are joined, because they point to the same Source: the hidden pressure for justice and peace at work in the world. This Source allows grace and truth to be discovered in social issues, Indeed, the grace of God generates compassion, a prerequisite for multifaceted social justice. Wrath has no capacity to foster anything but fear of being left behind. There are single-issue books of three-hundred-plus pages, but there are no books that speak to a variety of social issues. This one does speak to a variety of social issues with clarity, readability, and economy.

totally science unofficial links: Soviet Fiction since Stalin Rosalind J. Marsh, 2022-03-14 First published in 1986, Soviet Fiction since Stalin presents a comprehensive overview of the literature of the post Stalin period in the Soviet Union. The rapid advances in science and technology in these years are reflected in the themes of many of the major novelists – Pasternak, Solzhenitsyn, Sinyavsky, Daniel and Grossman- and scientific subjects frequently offer a vehicle for the exploration of the wider socio-political, moral, and philosophical ideas. As the period advances, however, literature becomes the first medium in which to express mistrust of scientific advance, and hence, indirectly, of Soviet policy as a whole. Rosalind J. Marsh uses a broad definition of ‘science’ which enables her to cover topics ranging from de-Stalinization, nationalism, and anti- Semitism in science, to Lysenko and scientific charlatanism, the Soviet rejection of relativity theory and quantum mechanics, the atom bomb, and also such general problems as secrecy, careerism, and bureaucracy. The bulk of the book concentrates on the Khrushchev years but there is also plentiful discussion of more recent writing such as that of Zinoviev and Voinovich. This book will be of interest to students and researchers of Soviet literature, Russian Literature and literature in general.

totally science unofficial links: **Plural Action** Hans Bernhard Schmid, 2009-05-30 Collective Intentionality is a relatively new label for a basic social fact: the sharing of attitudes such as intentions, beliefs and emotions. This volume contributes to current research on collective intentionality by pursuing three aims. First, some of the main conceptual problems in the received literature are introduced, and a number of new insights into basic questions in the philosophy of collective intentionality are developed (part 1). Second, examples are given for the use of the analysis of collective intentionality in the theory and philosophy of the social sciences (part 2). Third, it is shown that this line of research opens up new perspectives on classical topics in the history of social philosophy and social science, and that, conversely, an inquiry into the history of ideas can lead to further refinement of our conceptual tools in the analysis of collective intentionality (part 3).
