Plagiarism at Indiana University is defined as the unauthorized use or close imitation of the language, thoughts, ideas, or expressions of another author and presenting them as one's own original work. This definition aligns with general academic standards but is explicitly detailed in IU's Code of Student Rights, Responsibilities, and Conduct. The university emphasizes that plagiarism undermines the learning process and violates the trust between students and faculty. IU's definition also covers the failure to properly cite sources, copying from peers, and submitting previously submitted work without permission. Understanding this definition is fundamental for all IU students to ensure compliance with academic standards.

Paraphrasing Plagiarism

Paraphrasing plagiarism happens when a student rephrases someone else's ideas or text without proper acknowledgment. Even if the wording is changed, the original source must be cited to avoid plagiarism.

Accidental Plagiarism

Accidental plagiarism results from neglecting to cite sources correctly or misunderstanding citation rules. IU encourages students to learn proper referencing techniques to prevent such mistakes.

what is plagiarism iu: *Educational Technology and Narrative* Brad Hokanson, Gregory Clinton, Karen Kaminski, 2017-12-09 This volume is the result of a 2016 research symposium sponsored by the Association for Educational Communications and Technology (AECT) focused on the growing theoretical areas of integrating story and narrative into educational design. Narrative, or storytelling, is often used as a means for understanding, conveying, and remembering the events of our lives. Our lives become a series of stories as we use narrative to structure our thinking; stories that teach, train, socialize, and create value. The contributions in this volume examine stories and narrative in instructional design and offer a diverse exploration of instructional design and learning environments. Among the topics discussed: The narrative imperative: creating a story telling culture in the classroom. Narrative qualities of design argumentation. Scenario-based workplace training as storytelling. Designing for adult learners' metacognitive development & narrative identity. Using activity theory in designing science inquiry games . Changing the narrative of school: toward a neurocognitive redefinition of learning. *Educational Technology and Narrative* is an invaluable resource offering application-ready ideas to students of instructional design, instructional design practitioners, and teachers seeking to utilize theories of story and narrative to the ways that they convey and express ideas of instructional design and educational technology.

The objective of any research project is to gather data, analyse it based on your research question and present your findings and conclusions. For students, having the right approach to these steps can mean the difference between an easily handled process resulting in a well argued and presented project, or panicked flailing, misdirection and confusion. For those fearful of not getting enough research done, doing it the wrong way, putting it together incorrectly, or unsure of what the end result will be, then *Understanding Research* is an invaluable guide to getting it right and putting fears to bed. Successfully completing a research project is a major milestone in most university degrees, and it should be daunting – although not unassailable. This book provides students with the guidance necessary to start, undertake and present their research project in social science or the humanities. This text addresses: Where do I start? what is plagiarism iu: Teaching and Learning at a Distance Michael Simonson, Susan Zvacek, 2024-01-01 *Teaching and Learning at a Distance* is written for introductory distance education courses for preservice or in-service teachers, and for training programs that discuss teaching distant learners or managing distance education systems. This text provides readers with the basic information needed to be knowledgeable distance educators and leaders of distance education programs. The teacher or trainer who uses this book will be able to design courses, evaluate programs, and identify issues and trends affecting the field. In this text we take the following themes: The first theme is the definition of distance education. Before we started writing the first edition of *Teaching and Learning at a Distance* we carefully reviewed the literature to determine the definition that would be at the foundation of our writing. This definition is based on the work of Desmond Keegan, but is unique to this book and has been adopted by the Association for Educational Communications and Technology and by the *Encyclopedia Britannica*. The second theme of the book is the importance of research to the development of effective courses and programs offered at a distance. The best practices presented in *Teaching and Learning at a Distance* are validated by scientific evidence. Certainly there are “rules of thumb,” but we have always attempted to only include recommendations that can be supported by research. The third theme of *Teaching and Learning at a Distance* is derived from Richard Clark’s famous quote published in the *Review of Educational Research* asserting that media are mere vehicles that do not directly influence achievement. Clark’s controversial work is discussed in the book, but is also fundamental to the book’s advocacy for distance education—in other words, we authors do not make the claim that education delivered at a distance is inherently better than other ways people learn. Distance delivered instruction is not a magical approach that makes learners achieve more. Equivalency theory is the fourth theme of the book. Here we present the concept that instruction should be

provided to learners that is equivalent rather than identical to what might be delivered in a traditional environment. Equivalency theory helps the instructional designer approach the development of instruction for each learner without attempting to duplicate what happens in a face-to-face classroom. The final theme for Teaching and Learning at a Distance is the idea that the book should be comprehensive—that it should cover as much of the various ways instruction is made available to distant learners as is possible. It can serve as a stand-alone source of information.

what is plagiarism iu: Introduction to Human Development and Family Studies Bridget A. Walsh, Dana A. Weiser, Lydia DeFlorio, Melissa M. Burnham, 2017-03-31 Introduction to Human Development and Family Studies is the first text to introduce human development and family studies (HDFS) as inextricably linked areas of study, giving students a complex yet realistic view of individuals and families. Pioneers of research paradigms have acknowledged that the family is one setting in which human development occurs. Moreover, in many academic programs, the lines of these two disciplines blur and much work is inherently multidisciplinary and interdisciplinary. This book helps to fortify an understanding of HDFS and subareas within it. Vignettes from current HDFS students as well as new professionals, an overview of the lifespan stage(s) within the family context, a wide description of research methods and applications, current policy issues relevant to the area, and discussions of practice/careers coupled with strategies for pursuing specializations or careers in the area are hallmarks of this textbook. Introduction to Human Development and Family Studies is essential reading for students new to the major and minor wanting to know: What is HDFS? Who are the people involved in HDFS? Why is HDFS important? How does theory and research inform work in HDFS? What does the pursuit of being an ethical professional require? What are the key areas in HDFS? Incredibly user-friendly both on the page and online, the text also features the following resources: Chapter Summaries where the main points of each chapter are pinpointed at the end of every chapter for review and study. Key Terms listed and defined within the margins of every chapter, a complete Glossary at the end of the text, and Flashcards online for additional review and study. Challenge: Integration section at the end of each chapter that underscores concepts from the chapter and draws connections between content presented in other chapters. Journal Questions to encourage reflection about the content and encourage thinking about some of the content coupled with students' own experiences. Suggested Resources that lists relevant websites, books, articles, and video links for further study. A Closer Look at Applied Experiences Appendix outlines the internship process and shows how the internship experience can be meaningful and useful, and a Consuming Research Appendix that focuses on what it means to be a consumer of research, the knowledge and skills consumers need, and considerations for transitioning from a consumer of research to a producer of research.
