human cheat code: Our Tribal Future David R. Samson, 2023-05-30 Winner of the 2023 Balsillie Prize for Public Policy An astounding and inspiring look at the science behind tribalism, and how we can learn to harness it to improve the world around us. What do you think of when you hear the word “tribalism?” For many, it conjures images of bigotry, xenophobia, and sectarian violence. Others may envision their own tribe: family, friends, and the bonds of loyalty that keep them together. Tribalism is one of the most complex and ancient evolutionary forces; it gave us the capacity for cooperation and competition, and allowed us to navigate increasingly complex social landscapes. It is so powerful that it can predict our behavior even better than race, class, gender, or religion. But in our vast modern world, has this blessing become a curse? Our Tribal Future explores a central paradox of our species: how altruism, community, kindness, and genocide are all driven by the same core adaptation. Evolutionary anthropologist David R. Samson engages with cutting-edge science and philosophy, as well as his own field research with small-scale societies and wild chimpanzees, to explain the science, ethics, and history of tribalism in compelling and accessible terms. This bold and brilliant book reveals provocative truths about our nature. Readers will discover that tribalism cannot, and should not, be eliminated entirely—to do so would be to destroy what makes us human. But is it possible to channel the best of this instinct to enrich our lives while containing the worst of its dangers?

human cheat code: Allergic to Life Frank Lichtenberger, 2023-11-28 This easy-to-read title provides a comprehensive discussion of the major changes in daily life that have led to states of increased bodily inflammation. Indeed, today there is an epidemic of allergic and autoimmune disease in the first and developing world. While outdoor climate change is now considered common knowledge, the impact of longer work hours, artificial lighting, increased food shelf life, and changes to the microbiome all have made a large impact in increasing allergies worldwide. An allergy, best defined as a “damaging response from the Immune system due to a substance in the environment,”

starts with warning signals, or generalized symptoms, that are caused by something in the environment. Itching, aches, pains, swelling, coughing, and fatigue are all immune responses. Written in an engaging -- and often humorous -- style by an allergist/immunologist, the first three chapters outline how the human body is in an unquestionably harmful environment, and that, in general, the immune system is just doing its job. In subsequent chapters, the specific topics contributing to allergies are covered in detail, starting with microorganisms and a focus on indoor living. Dust mites, for example, are addressed in one full chapter -- and for good reason. The past few decades have seen an explosion of climate controlled, humidified indoor airspace that is ideally suited for more mass production of mites. In the end, emphasizes the author, all roads of inflammation from the environment lead to the "mast cell compartment." The stress responses of the body summarily drive up this compartment and have led to a world-wide prevalence of between 14% to 17% of "mast cell activation syndrome." While genetics and comorbid conditions are important in any symptom or disease process, the mast cell compartment feeds and grows off all the major environmental changes of the past 50 or so years. This is why the human body in the 21st century is in a low level state of "rejection," of the world, says the author. Most of these changes are irreversible, but the situation is not hopeless. Understanding how the body changes itself in response to its environment will allow controlled desensitization to the environment. *Allergic to Life: How the Human Body Rejects the Modern World* serves as a concise and lively text for clinicians and general readers interested in a deep, expert dive into the world of allergy and immunology.
