grounded walkthrough: The Geographies of Digital Sexuality Catherine J. Nash, Andrew

Gorman-Murray, 2019-05-22 This edited book engages with the rapidly emerging field of the geographies of digital sexualities, that is, the interlinkages between sexual lives, material and virtual geographies and digital practices. Modern life is increasingly characterised by our integrated engagement in digital/material landscapes activities and our intimate life online can no longer be conceptualised as discrete from 'real life.' Our digital lives are experienced as a material embeddedness in the spaces of everyday life marking the complex integration of real and digital geographies. Perhaps nowhere is this clearer than in the ways that our social and sexual practices such as dating or casual sex are bound up online and online geographies and in many cases constitute specific sexuality-based communities crossing the digital/material divide. The aim of this collection is to explore the complexities of these newly constituted and interwoven sexual and gender landscapes through empirical, theoretical and conceptual engagements through wide-ranging, innovative and original research in a new and quickly moving field.

grounded walkthrough: Constructive Axiomatics for Spacetime Physics Emily Adlam, Niels Linnemann, James Read, 2025-06-25 The programme of 'constructive axiomatics', promulgated by Hans Reichenbach in 1924, seeks to build up the architecture of our best theories of physics from basic axioms supposedly imbued with immediate and indubitable empirical content. Taking inspiration from Reichenbach, Hermann Weyl proposed his own 'causal-inertial' approach to the constructive axiomatization of Einstein's general relativity, according to which a relativistic spacetime can be constructed solely from the trajectories of light rays and freely-falling particles; this project, however, came to fruition only in 1972, with the constructive axiomatization of general relativity due to Ehlers, Pirani, and Schild ('EPS'). One century since Reichenbach, and fifty years since EPS, *Constructive Axiomatics for Spacetime Physics* is a celebration of the constructive axiomatic methodology. It achieves four main tasks. First, it provides a thoroughgoing presentation

of the EPS axiomatization, closing missing loopholes, identifying problematic axioms, and so forth—in this way, one gains a much-improved appreciation of the extent to which a causal-inertial approach to general relativity might succeed, and of what such an approach might offer. Second, it synthesizes and assesses the vast but disparate literature on constructive axiomatics which has arisen over the past century and sets the methodology in its proper philosophical context. Third, it generalizes the approach to apply to quantum spacetimes. And fourth, it applies the approach to the context of non-relativistic spacetime physics. All in all, the book demonstrates that constructive axiomatics is live-and-kicking; the book will become the go-to resource for this way of philosophizing about the nature of space and time.
