It was both technological spectacle and political messaging, for speeches at the event lauded President Porfirio Díaz and bound such progress to his vision of a modern order. Diana J. Montaña explores the role of electricity in Mexico's economic and political evolution, as the coal-deficient country pioneered large-scale hydroelectricity and sought to face the world as a scientifically enlightened "empire of peace." She is especially concerned with electrification at the social level. Ordinary electricity users were also agents and sites of change. Montaña documents inventions and adaptations that served local needs while fostering new ideas of time and space, body and self, the national and the foreign. Electricity also colored issues of gender, race, and class in ways specific to Mexico. Complicating historical discourses in which Latin Americans merely use technologies developed elsewhere, *Electrifying Mexico* emphasizes a particular national culture of scientific progress and its contributions to a uniquely Mexican modernist political subjectivity.

general electric refrigerator manuals: Refrigerator Helen Peavitt, 2017-11-15 From a

late-night snack to a cold beer, there's nothing that whets the appetite quite like the suctioning sound of a refrigerator being opened. In the early 1930s fewer than ten percent of US households had a mechanical refrigerator, but today they are nearly universal, the primary means by which we keep our food and drink fresh. Yet, for as ubiquitous as refrigerators are, most of us take them for granted, letting them blend into the background of our kitchens, basements, garages, and all the other places where they seem so perfectly convenient. In this book, Helen Peavitt amplifies the hum of the refrigerator in technological history, showing us just how it became such an essential appliance. Peavitt takes us to the early closets, cabinets, and boxes into which we first started packing ice and the various things we were trying to keep cool. From there she charts the development of mechanical and chemical technologies that have led to modern-day refrigeration on both industrial and domestic scales, showing how these technologies have created a completely new method of preserving and transporting perishable goods, having a profound impact on society from the nineteenth century and on. She explores the ways the marketing of refrigerators have expressed and influenced our notions of domestic life, and she looks at how refrigeration has altered the agriculture and food industries as well as our own appetites. Strikingly illustrated, this book offers an informative and entertaining history of an object that has radically changed—in a little over one hundred years—one of the most important things we do: eat.

general electric refrigerator manuals: How to Weed Your Attic Elizabeth H. Dow, Lucinda P. Cockrell, 2018-08-16 How to Weed Your Attic: Getting Rid of Junk without Destroying History provides answers to the question: when someone dies or it's time to move --- or just clean out the attic, garage, or basement, what papers and other things should we save for the sake of history and what can we safely toss? After reading this clearly written book by a retired archivist and a retired museum curator, you can comfortably clean out your attic - or office, garage, basement, cupboards - with confidence that you're not tossing out historically valuable (or invaluable) things, and that you will not ask your local museum to take things that really belong in a thrift store, junk yard, or recycle center. The book first describes how to identify historically important documents and artifacts. The authors explain a few simple rules: 1) a complete or long collection has more value than a partial one; 2) emotive material provides a richer picture than factual material; 3) unique usually has more value than mass produced; 4) documents and objects carry more information than they intend to; and 5) a 25-year rule exists without our consciously recognizing it. They then apply the rules and assess the probable historical value of four different types of materials: mass produced (from books to vehicles), individually created (from art work to toys), business materials (from governance documents to uniforms), and commemorative materials (from awards to wedding dresses). The book includes a brief description of the basics for preserving materials the reader wants to keep and references sources for more detail. It also recognizes that the reader may not want to keep stuff that clearly has historical value. For those readers, the authors describe how to donate materials to a cultural repository. In broad strokes, they explain how repositories differ, what the repository will want to know about the stuff you're offering, where an appraiser and/or tax advisor fits into the process, and what the reader can expect the repository to do and not do. Finally, the book addresses unexpected issues that may arise around questions of legal ownership and privacy. Throughout the

book, the authors illustrate their points using photographs and vignettes.
