Students should also be aware that some courses may utilize digital textbooks or online platforms, which can change the format of required materials. Checking with professors and course outlines will ensure students are well-informed about their textbook needs.

- **Open Educational Resources (OER):** Many educators are adopting OER, which are free, openly licensed educational materials. These resources can include textbooks, lecture notes, and interactive media.
- **Library Resources:** As previously mentioned, libraries often have textbooks available for loan. Additionally, many libraries subscribe to digital platforms that provide access to e-books and academic journals.
- **Course Packs:** Some instructors create course packs that compile essential readings and materials specific to the course. These packs can often be purchased at a lower cost than traditional textbooks.
- **Study Groups:** Forming study groups can allow students to pool resources and share textbooks, reducing the individual burden of purchasing multiple books.

Exploring these alternatives can help students save money while still gaining access to the educational materials they need.

Tips for Maximizing Your Textbook Investment

To get the most out of their textbook purchases, students should consider the following tips:

- **Buy Used Textbooks:** Purchasing used textbooks can significantly reduce costs. Check condition and edition before buying to ensure the material is still relevant.
- **Sell Textbooks After Use:** After the semester ends, students can sell their textbooks to recoup some of their costs. Online marketplaces and campus exchanges are great for this.
- **Take Advantage of Digital Tools:** Many digital textbooks come with additional resources, such as quizzes and study aids. Utilizing these tools can enhance the learning experience.
- **Plan Ahead:** Purchasing textbooks early can help students avoid last-minute price increases, especially for popular titles or editions.

u w madison textbooks: Wisconsin in the World Elise S. Ahn, 2023-07-01 During the 2020 and 2021 phases of the global COVID-19 pandemic, there was significant prognostication regarding what internationalization in higher education would look like in its aftermath. Within the field of international education, many stated the need to reimagine internationalization in and of higher education in the face of severe budget cuts, restrictions on travel, and increased government protectionism in the face of growing nationalistic populism globally to name a few challenges. Absent from many of those discussions, however, were the voices of many leader-practitioners who have had to think flexibly about internationalization in higher education in order to sustain and grow programs throughout the last 20 years despite numerous exogenous factors, e.g., earlier economic recessions and viral outbreaks, along with endogenous factors like internal leadership transitions and institutional reorganizations. Wisconsin in the World explores how internationalization at the University of Wisconsin-Madison (UW) has been a decades-long, ongoing endeavor. Against that backdrop, the various chapters also provide a snapshot of how people across the UW campus were reflecting on their work amidst the COVID-19 pandemic and on the implications of the pandemic

regarding the future of campus internationalization. The book is organized into four overarching sections—internationalization of the curriculum (general and language); experiential learning (co-curricular engagement and education away); establishing linkages (institutional and outreach); and administration. To highlight the expansive way campus units have been engaging in internationalization, a wide-ranging set of chapter case studies have been included. Although not exhaustive, this volume does provide a robust cross-sectional view into internationalization at UW. For international education scholars and practitioners then, a number of the chapters also highlight areas that may warrant further engagement and exploration moving forward. Finally, by examining how internationalization at UW has been informed by the Wisconsin Idea, this book explores how institutional internationalization strategies can align with and be tailored to institutional values for long-term sustainability. In addition to the 34 chapters focusing on different units and programs at UW, *Wisconsin in the World* also includes a number of contributions from colleagues at other institutions. Each section has a lead-in chapter which provides an overview of the scholarship in that particular area and/or a concluding chapter from a scholar-practitioner situating the UW “cases” in relation to their own work. The intention of structuring the book this way was to facilitate a dialogue among UW colleagues, across institutions, and with the scholarship in the field. The target audience for *Wisconsin in the World* includes practitioners or scholar practitioners in the field of international education (study abroad, education away, internships, partnerships, program development), as well as faculty and students in global higher education or comparative and international education graduate programs. Additionally, this volume may be of general interest for any higher education administrator who may not have a background in international education but may become responsible for programs and support within a school or college context (e.g., a dean or department chair).

u w madison textbooks: Centering Humanism in STEM Education Bryan Dewsbury, Susannah McGowan, Sheila S. Jaswal, Desiree Forsythe, 2024-09-24 Research demonstrates that STEM disciplines perpetuate a history of exclusion, particularly for students with marginalized identities. This poses problems particularly when science permeates every aspect of contemporary American life. Institutions' repeated failures to disrupt systemic oppression in STEM has led to a mostly white, cisgender, and male scientific workforce replete with implicit and/or explicit biases. Education holds one pathway to disrupt systemic linkages of STEM oppression from society to the classroom. Maintaining views on science as inherently objective isolates it from the world in which it is performed. STEM education must move beyond the transactional approaches to transformative environments manifesting respect for students' social and educational capital. We must create a STEM environment in which students with marginalized identities feel respected, listened to, and valued. We must assist students in understanding how their positionality, privilege, and power both historically and currently impacts their meaning making and understanding of STEM.
