cliff notes for textbooks: Post-process Theory Thomas Kent, 1999 Breaking with the still-dominant process tradition in composition studies, post-process theory--or at least the different incarnations of post-process theory discussed by the contributors represented in this collection of original essays--endorses the fundamental idea that no codifiable or generalizable writing process exists or could exist. Post-process theorists hold that the practice of writing cannot be captured by a generalized process or a big theory. Most post-process theorists hold three assumptions about the act of writing: writing is public; writing is interpretive; and writing is situated. The first assumption is the commonsensical claim that writing constitutes a public interchange. By interpretive act, post-process theorists generally mean something as broad as making sense of and not exclusively the ability to move from one code to another. To interpret means more than merely to paraphrase; it means to enter into a relationship of understanding with other language users. And finally, because writing is a public act that requires interpretive interaction with others, writers always write from some position or some place. Writers are never nowhere; they are situated. Leading theorists and widely published scholars in the field, contributors are Nancy Blyler, John Clifford, Barbara Couture,

Nancy C. DeJoy, Sidney I. Dobrin, Elizabeth Ervin, Helen Ewald, David Foster, Debra Journet, Thomas Kent, Gary A. Olson, Joseph Petraglia, George Pullman, David Russell, and John Schilb.

cliff notes for textbooks: *Paradigm Shift in Language Planning and Policy* Ettien Koffi, 2012-01-27 The book proposes a paradigm shift in language planning and language policy in Africa. For the past fifty years, the dominant model has been the hegemonic model whereby a language of wider communication (LWC) is imposed on minority languages. It is now time for a paradigm shift in favor of a more egalitarian model in which all the languages spoken in the same country, irrespective of their size, are planned. The paradigm shift concerns four critical areas: status planning, cost-benefit planning, acquisition planning, and corpus planning. Such a shift is justified for the following reasons: First, the hegemonic model has a dismal track record of success in Africa and elsewhere. Second, the hegemonic model exacerbates linguistic conflicts in many countries. Consequently, policy makers shun it for fear of jeopardizing the fragile social fabric in their respective countries. Last, a shift away from the hegemonic model is recommended because it is too costly to implement. The democratic model is undergirded by the Strategic Game Theory proposed by David Laitin. It forecasts a 3±1 language outcome for most African countries. This outcome

supports the three language formula now called for by the United Nations Development Program (UNDP).
