They nurture local communities while creating new ones of their own. Bookshops are powerful spaces, but they are also endangered ones. In *The Bookshop*, we see the stakes: what has been, and what might be lost. Evan Friss's history of the bookshop draws on oral histories, archival collections, municipal records, diaries, letters, and interviews with leading booksellers to offer a fascinating look at this institution beloved by so many. The story begins with Benjamin Franklin's first bookstore in Philadelphia and takes us to a range of booksellers including the Strand, Chicago's Marshall Field & Company, the Gotham Book Mart, specialty stores like Oscar Wilde and Drum and Spear, sidewalk sellers of used books, Barnes & Noble, Amazon Books, and Parnassus. *The Bookshop* is also a history of the leading figures in American bookselling, often impassioned eccentrics, and a history of how books have been marketed and sold over the course of more than two centuries—including, for example, a 3,000-pound elephant who signed books at Marshall Field's in 1944. *The Bookshop* is a love letter to bookstores, a charming chronicle for anyone who cherishes these sanctuaries of literature, and essential reading to understand how these vital institutions have shaped American life—and why we still need them.

textbooks at barnes and noble: Federation over the Web Klaus P. Jantke, Aran Lunzer, Nicolas Spyrtatos, Yuzuru Tanaka, 2006-01-19 The lives of people all around the world, especially in industrialized nations, continue to be changed by the presence and growth of the Internet. Its

influence is felt at scales ranging from private lifestyles to national economies, boosting the pace at which modern information and communication technologies influence personal choices along with business processes and scientific endeavors. In addition to its billions of HTML pages, the Web can now be seen as an open repository of computing resources. These resources provide access to computational services as well as data repositories, through a rapidly growing variety of Web applications and Web services. However, people's usage of all these resources barely scratches the surface of the possibilities that such richness should offer. One simple reason is that, given the variety of information available and the rate at which it is being extended, it is difficult to keep up with the range of resources relevant to one's interests. Another reason is that resources are offered in a bewildering variety of formats and styles, so that many resources effectively stand in isolation. This is reminiscent of the challenge of enterprise application integration, familiar to every large organization be it in commerce, academia or government.

The challenge arises because of the accumulation of information and communication systems over decades, typically without the technical provision or political will to make them work together. Thus the exchange of data among those systems is difficult and expensive, and the potential synergistic effects of combining them are never realized.
