qcc textbooks: Chinese for Specific and Professional Purposes Hongyin Tao, Howard Hao-Jan Chen, 2019-08-20 This book, likely the first of its kind in the English language, explores Chinese for specific and professional purposes (CSP) in terms of theorizing and developing practical applications for language teaching and learning. While research in language for specific purposes is thriving for languages such as English, there has been comparatively little such research conducted for Chinese. This volume attempts to fill the gap by bringing together practitioners from a broad international scholarly community, who share common interests yet diverse orientations. Seventeen papers are included, and address four broad thematic categories: (1) academic Chinese, (2) business Chinese, (3) Chinese for medicine and health care, and (4) Chinese for other broadly defined services and industries (diplomacy, tourism, wine-tasting, etc.). Representing the state of the art in CSP research, the book offers an indispensable guide for anyone interested in theoretical and practical issues in this area of applied Chinese language studies.

qcc textbooks: *The New College Classroom* Cathy N. Davidson, Christina Katopodis, 2022-08-30 What the latest science of learning tells us about inspiring, effective, and inclusive teaching at the college level. College instruction is stuck in the past. If a time traveler from a century ago arrived on today's campuses, they would recognize only too well the listlessness of the lecture hall and the awkward silence of the seminar room. Yet we know how to do better. Cathy N. Davidson and Christina Katopodis, two of the world's foremost innovators in higher education, turn to the latest research and methods to show how teachers at every kind of institution can help students become independent, creative, and active learners. The New College Classroom helps instructors in all disciplines create an environment that is truly conducive to learning. Davidson and Katopodis translate cutting-edge research in learning science and pedagogy into ready-to-use strategies to incorporate into any course. These empirically driven, classroom-tested techniques of active learning—from the participatory syllabus and ungrading to grab-and-go activities for every

day of the term—have achieved impressive results at community colleges and research universities, on campus, online, and in hybrid settings. Extensive evidence shows that active-learning tools are more effective than conventional methods of instruction. Davidson and Katopodis explain how and why their approach works and provide detailed case studies of educators successfully applying active-learning techniques in their courses every day, ensuring that their students are better prepared for the world after college.
