ece textbooks: *Random Processes with Applications to Circuits and Communications* Bernard C. Levy, 2019-09-14 This textbook is based on 20 years of teaching a graduate-level course in random processes to a constituency extending beyond signal processing, communications, control, and networking, and including in particular circuits, RF and optics graduate students. In order to accommodate today's circuits students' needs to understand noise modeling, while covering classical material on Brownian motion, Poisson processes, and power spectral densities, the author has inserted discussions of thermal noise, shot noise, quantization noise and oscillator phase noise. At the same time, techniques used to analyze modulated communications and radar signals, such as the baseband representation of bandpass random signals, or the computation of power spectral densities of a wide variety of modulated signals, are presented. This book also emphasizes modeling skills, primarily through the inclusion of long problems at the end of each chapter, where starting from a description of the operation of a system, a model is constructed and then analyzed. Provides semester-length coverage of random processes, applicable to the analysis of electrical and computer engineering systems; Designed to be accessible to students with varying backgrounds in undergraduate mathematics and engineering; Includes solved examples throughout the discussion, as well as extensive problem sets at the end of every chapter; Develops and reinforces student's modeling skills, with inclusion of modeling problems in every chapter; Solutions for instructors included.

ece textbooks: *The Smart and the Dumb* Vishal Vasanthakumar, 2024-07-22 'When racial and sexual injustice have been reduced, we shall still be left with the grave injustice of the smart and the dumb'—Thomas Nagel Education achieves many things—it pulls people out of poverty, enables socio-economic mobility and promises a route to dignity. But what does education mean to different people, what does it do and whose needs are being met by education? Even as globalization and formal education have established themselves as unquestionable truths, only a privileged few have cornered its benefits. In this process, education is being reconceived and its promises are being rewritten. Today, there clearly is more to education than going to school, getting credentials and getting a job. This book is an attempt to capture what this 'more' is, by exploring education's connections to caste, class and gender and understanding how they affect the promise of education. In documenting the fractured realities of the many children who want guns for Christmas and the psychological trauma of conflict in Manipur, how a ban on toddy-tapping affects educational choices in Tamil Nadu or why a grandmother chose to get her fifteen-year-old granddaughter married to a seventeen-year-old truck driver in rural Rajasthan and many such stories, this book attempts to paint a portrait of the political and cultural processes that affect education.

ece textbooks: Narrating the Soviet Era in Russian School History Textbooks Olga Konkka, 2025-09-03 This study focuses on how Russian history textbooks published between 1992 and 2021 dealt with the topic of the Soviet period (1917–1991). Representations of this part of Russia's past in school manuals have provoked vivid debates and bolstered government intervention in the field, while a gradual shift towards a less critical narrative of the USSR in more recent textbooks is often presented as directed by Vladimir Putin. This study combines research into these texts and inquiry into those who write, publish, approve, or criticize them. Bringing together these perspectives provides a more complex view of school textbooks as final products of both top-down and bottom-up processes. This volume is aimed at postgraduates, researchers, and academics specializing in Soviet history, contemporary Russian politics and society, and history education and textbooks.

ece textbooks: *Globalisation and National Identity in History Textbooks* Joseph Zajda, 2017-07-06 Globalisation and National Identity in History Textbooks: The Russian Federation, the 16th book in the 24-volume book series Globalisation, Comparative Education and Policy Research, discusses trends in dominant discourses of identity politics, and nation-building in school history textbooks in the Russian Federation (RF). The book addresses one of the most profound examples of the re-writing of history following a geo-political change. Various book chapters examine debates pertaining to national identity, patriotism, and the nation-building process. The book discusses the way in which a new sense of patriotism and nationalism is documented in prescribed Russian history textbooks, and in the Russian media debate on history textbooks. It explores the ambivalent and problematic relationship between the state, globalisation and the construction of cultural identity in prescribed school history textbooks. By focusing on ideology, identity politics, and nation-building, the book examines history teachers' responses to the content of history textbooks and how teachers depict key moments in modern Russian history. This book, an essential sourcebook of ideas for researchers, practitioners and policymakers in the fields of globalisation and history education, provides timely information on history teachers' attitudes towards historical knowledge and historical understanding in prescribed Russian history textbooks.

ece textbooks: *The Economics Anti-Textbook* Rod Hill, Professor Tony Myatt, 2010-03-11 Mainstream textbooks present economics as an objective science free from value judgements; that settles disputes by testing hypotheses; that applies a pre-determined body of principles; and contains policy prescriptions supported by a consensus of professional opinion. The Economics Anti-Textbook argues that this is a myth - one which is not only dangerously misleading but also bland and boring. It challenges the mainstream textbooks' assumptions, arguments, models and evidence. It puts the controversy and excitement back into economics to reveal a fascinating and a vibrant field of study - one which is more an 'art of persuasion' than it is a science. The Economics Anti-Textbook's chapters parallel the major topics in the typical text, beginning with a boiled-down account of them before presenting an analysis and critique. Drawing on the work of leading economists, the Anti-Textbook lays bare the blind spots in the texts and their sins of omission and commission. It shows where hidden value judgements are made and when contrary evidence is ignored. It shows the claims made without any evidence and the alternative theories that aren't mentioned. It shows the importance of power, social context and legal framework. The Economics Anti-Textbook is the students' guide to decoding the textbooks and shows how real economics is much more interesting than most economists are willing to let on.

ece textbooks: *India on the Move* Marya Shakil, Narendra Nath Mishra, 2024-09-30 Things start to heat up in the national capital when protests erupt in the campus of JNU against the protestors of the judicial hanging of Afsal Guru and Maqbool Bhat. Very soon the students would go from being research scholars to 'jihadis', 'violent communists' and 'anti-nationals' resulting in the larger questions of a true nationalist. Slogans like Bharat mata ki jai and Jai Shri Ram, which were traditionally used to express reverence to the nation and a salutation to Lord Rama respectively, have been appropriated as political slogans. Whilst until now, Bharat Mata ki Jai and Jai Shree Ram ran parallel in the country's political discourse, today they lead the same way. On one hand, there are those who view patriotism and nationalism as synonymous with blind obedience and conformity. On the other, those who believe in a more inclusive and diverse India, where dissent and criticism

are essential components of a thriving and functioning democracy. This book attempts to view events following the JNU event, the farmers' protest, Balakot strikes and the subsequent unravelling of deep fissures within us.

ece textbooks: The Palgrave Handbook of Conflict and History Education in the Post-Cold War Era Luigi Cajani, Simone Lässig, Maria Repoussi, 2019-06-28 This Handbook provides a systematic and analytical approach to the various dimensions of international, ethnic and domestic conflict over the uses of national history in education since the end of the Cold War. With an upsurge in political, social and cultural upheaval, particularly since the fall of state socialism in Europe, the importance of history textbooks and curricula as tools for influencing the outlooks of entire generations is thrown into sharp relief. Using case studies from 58 countries, this book explores how history education has had the potential to shape political allegiances and collective identities. The contributors highlight the key issues over which conflict has emerged – including the legacies of socialism and communism, war, dictatorships and genocide – issues which frequently point to tensions between adhering to and challenging the idea of a cohesive national identity and historical narrative. Global in scope, the Handbook will appeal to a diverse academic audience, including historians, political scientists, educationists, psychologists, sociologists and scholars working in the field of cultural and media studies.

ece textbooks: Discourses of Globalisation, and the Politics of History School Textbooks Joseph Zajda, 2022-08-19 This book focuses on discourses of the politics of history education and history textbooks. It offers a new insight into understanding of the nexus between ideology, the state, and nation-building, as depicted in history education and school textbooks. It especially focuses on the interpretation of social and political change, significant events, looking for possible biases and omissions, leadership and the contribution of key individuals, and continuities. The book discusses various aspects of historical narratives, and some selected key events in defining identity and nation-building. It considers the role of historiography in dominant historical narratives. It analyses history education, in both local and global settings, and its significance in promoting values education and intercultural and global understanding. It is argued that historical narratives add pedagogies, grounded in constructivist, metacognitive and transformational paradigms, have the power to engage the learner in significant and meaningful learning experiences, informed by multiple discourses of our historical narratives and those of other nations.
