1970s textbooks: In Search of an Identity Edward Vickers, 2004-03-01 This book traces the influences that have shaped the secondary school history curriculum during Hong Kong's prolonged political transition between the 1960s and the early 21st century, focusing especially on the relationship between history teaching and identity formation. The author's experience as a local history teacher during the mid-1990s made him conscious of the peculiarities of the history curriculum at the time; in particular, the neglect of Hong Kong's own history in both syllabuses and textbooks, and the unique division between 'History' and the entirely separate subject of 'Chinese History'.

1970s textbooks: Economics Made Fun N. Aydinonat, Jack Vromen, 2017-10-02 Best-selling books such as Freakonomics and The Undercover Economist have paved the way for the flourishing economics-made-fun genre. While books like these present economics as a strong and explanatory science, the ongoing economic crisis has exposed the shortcomings of economics to the general public. In the face of this crisis, many people, including well-known economists such as Paul Krugman, have started to express their doubts about whether economics is a success as a science. As well as academic papers, newspaper columns with a large audience have discussed the failure of economic to predict and explain ongoing trends. The emerging picture is somewhat confusing: economics-made-fun books present economics as a method of thinking that can successfully explain everyday and freaky phenomena. On the other hand, however, economics seems to fail in addressing and explaining the most pressing matters related to the field of economics itself. This book explores the confusion created by this contradictory picture of economics. Could a science that cannot answer its own core questions really be used to explain the logic of everyday life? This book was originally published as a special issue of the Journal of Economic Methodology.

1970s textbooks: Jung's Theory of Personality Clare Crellin, 2014-05-23 This book provides a re-appraisal of Carl Jung's work as a personality theorist. It offers a detailed consideration of Jung's work and theory in order to demystify some of the ideas that psychologists have found most difficult, such as Jung's religious and alchemical writings. The book shows why these two elements of his theory are integral to his psychology of personality and goes on to propose a framework on which to base a collaborative research programme that could provide much needed and, at present, unavailable validation data for some of Jung's key theoretical concepts. Divided into two parts, theory and practice, the author begins by emphasising the importance of religion and alchemy for understanding Jung's key concepts of individuation and the self, as well the link between Jung's concept of the archetype and its function in the development and transformation of personality. The book considers the whole of Jung's work as a comprehensive theory of personality to which all strands, including his writings on religion and on alchemy contribute. The second part of the book is both empirical and theoretical. Crellin reviews the history of the presentation of Jung's work in personality literature and discusses how inaccurate representation, the limitations of existing evaluation criteria, and consequent negative perceptions of Jung's theory in textbooks of personality psychology have contributed to the creation of a mythical Jung. This book will appeal to both psychological practitioners who are unfamiliar, or only have a vague understanding of Jung's ideas, as well as Jungian psychoanalysts, who are knowledgeable about Jung's writings, but whose training may not have addressed the problem of theory evaluation in relation to Jung's theory.

1970s textbooks: War Memory, Nationalism and Education in Postwar Japan Yoshiko Nozaki, 2008-06-23 The controversy over official state-approved history textbooks in Japan, which omit or play down many episodes of Japan's occupation of neighbouring countries during the Asia-Pacific War (1931-1945), and which have been challenged by critics who favour more critical, peace and justice perspectives, goes to the heart of Japan's sense of itself as a nation. The degree to which

Japan is willing to confront its past is not just about history, but also about how Japan defines itself at present, and going forward. This book examines the history textbook controversy in Japan. It sets the controversy in the context of debates about memory, and education, and in relation to evolving politics both within Japan, and in Japan's relations with its neighbours and former colonies and countries it invaded. It discusses in particular the struggles of Ienaga Saburo, who has made crucial contributions, including through three epic lawsuits, in challenging the official government position. Winner of the American Educational Research Association 2009 Outstanding Book Award in the Curriculum Studies category.

1970s textbooks: *Globalisation, Cultural Identity and Nation-Building* Joseph Zajda, Suzanne Majhanovich, 2021-02-11 This book critiques dominant discourses and debates pertaining to cultural identity, set against the current backdrop of growing social stratification and unequal access to quality education. It addresses current discourses concerning globalisation, ideologies and the state, as well as approaches to constructing national, ethnic and religious identities in the global culture. It explores the ambivalent and problematic connections between the state, globalisation, the construction of cultural identity, and the nation-building process – also in connection with history education and the history textbooks used in schools. The book also explores conceptual frameworks and methodological approaches applicable to research on the state, globalisation, nation-building and identity politics. Drawing on diverse paradigms, ranging from critical theory to globalisation, the book, by focusing on globalisation, ideology and cultural identity, critically examines recent research in history education and its impact of identity politics, as well as the most significant dimensions defining and contextualising the processes surrounding nation-building and identity politics globally. Given the need for a multiple perspective approach, the authors, who have diverse backgrounds and hail from different countries and regions, offer a wealth of insights, contributing to a more holistic understanding of the nexus between the nation-state and national identity.

1970s textbooks: *South Asia* Dhananjay Tripathi, Sanjay Chaturvedi, 2021-11-24 Post-colonial and post-partition South Asia, one of the fastest-growing and yet one of the least integrated regions of the world, is marked by both optimism and pessimism. This intriguing dichotomy of strength and weakness, security and insecurity, hope and fear, connections and disconnects underpins South Asia's regionalism conundrum and gives birth to borders and boundaries – both material and mental – with a complex territoriality. The Janus-faced nature of South Asian borderlands – the inward nationalizing impulses entangled with the outward regional frontier-orientations – is a stark reminder that history of mobility in this eco-geographical region is much older than the history of territoriality and colonial cartography and ethnography. This collection of meticulously researched, theoretically informed, case studies from South Asia provides useful insights into bordering, ordering and othering narratives as practices and performances that are intricately entangled with identity politics and security discourses. It shows how a sharper focus on subterranean subregionalism(s), border communities, popular geopolitics of enmity, and transborder challenges to

sustainability, could open up spaces for new multiple (re)imaginings of borders at diverse scales and sights including sub-urban neighbourhoods, school textbooks/cinema and trans-border conservation initiatives. The chapters in this edited volume have been contributed by both renowned as well as young emerging scholars, looking into the borders and boundaries in South Asia. Each chapter offers new perspectives and insights into themes like trans-Himalayan borderlands, India-Pakistan physical and mental borders, Afghanistan-Pakistan border and numerous social boundaries that we see in everyday South Asia. The chapters in this book were originally published as a special issue of the *Journal of Borderlands Studies*.

1970s textbooks: *New Turns in the History of Education in Ireland* Deirdre Raftery, 2023-06-27 The chapters in this book offer a range of impressive new studies on the history of education in Ireland, based on detailed research and drawing on important sources. This book also serves to show the healthy state of the history of education in Ireland. In particular, the book also seeks to understand how both teachers and pupils in Ireland experienced education, and how they 'received' education policies and education change. The lived reality of education is woven through the chapters in this book, while the impact of policy on education practice is illuminated many times, and with great clarity. This book is a very important contribution not only to the history of education, but also more widely to social history, women's history, church history and political history. It was originally published as a special issue of the journal *History of Education*.

1970s textbooks: *De-Bordering Korea* Valérie Gelézeau, Koen De Ceuster, Alain Delissen, 2013-05-02 As tensions remain on the Korean peninsula, this book looks back on the decade of improved inter-Korean relations and engagement between 1998 and 2008, now known as the 'Sunshine Policy' era. Moving beyond traditional economic and political perspectives, it explores how this decade of intensified cooperation both affected and reshaped existing physical, social and mental boundaries between the two Koreas, and how this 'de-bordering' and 're-bordering' has changed the respective attitudes towards the other. Based around three key themes, 'Space', 'People', and 'Representations', this book looks at the tangible and intangible areas of contact created by North-South engagement during the years of the Sunshine Policy. 'Space' focuses on the border regions and discusses how the border reflects the dynamics of multiple types of exchanges and connections between the two Koreas, as well as the new territorial structures these have created. 'People' addresses issues in human interactions and social organizations, looking at North Korean defectors in the South, shifting patterns of North-South competition in the 'Korean' diaspora of post-Soviet Central Asia, and the actual and physical presence of the Other in various social settings. Finally, 'Representations' analyses the image of the other Korea as it is produced, circulated, altered/falsified and received (or not) on either side of the Korean border. The contributors to this volume draw on a broad spectrum of disciplines ranging from geography, anthropology and archaeology, to media studies, history and sociology, in order to show how the division between North and South Korea functions as an essential matrix for geographical, social and psychological structures on both sides of the border. As such, this book will appeal to students and scholars from numerous fields of study, including Korean studies, Korean culture and society, and international relations more broadly.

1970s textbooks: *Dismantling Orientalist Representations in US Education* Daniel Osborn, 2024-09-30 This book examines the evolving role played by the social studies classroom in shaping national identity and contributing to Orientalism, which depicts the peoples of the Middle East as “the Other” relative to those of the United States and Europe. Building upon the momentum of critical approaches to examining the nature of knowledge, the role of schools in society, and the trends within social studies education and its hidden curriculum, the volume crucially shifts the focus toward a more global emphasis, examining the nature of Orientalism and the school as a setting where Orientalist logic and assumptions about the Middle East and its inhabitants are reified. Focusing on the ecosystem of social studies knowledge production and working within the sociology of knowledge, it traces this evolution across the 19th, 20th, and 21st centuries. A novel and unique exploration of knowledge construction, and presenting a vision for a more nuanced and multifaceted portrayal of the Middle East that corrects for the deleterious aspects of Orientalism while avoiding a romanticized apologetic, it will appeal to scholars, researchers, and educators with interests in decolonizing education, social studies education, the history of education, and race and ethnicity studies.

1970s textbooks: *Learning From Textbooks* Bruce K. Britton, Arthur Woodward, Marilyn Binkley, 2012-11-12 It is surprising that there is so little research on textbooks, given their centrality to teaching and learning in elementary and secondary schools. Textbooks have become a focus of political and cultural controversy, advocating a multicultural curriculum that has sparked some vigorous protests. Research is absent in this debate; therefore, questions of legitimate knowledge, the role of textbooks, textbook design, policy selection issues, and economic issues concerning the marketplace are not part of the current debate. Without insights of research on considerate text, mentioning, illustrations and so forth, the current controversy will result in publishers responding to demands for more content not less; thus, textbooks will become compendia of information that on the surface satisfy everyone. This volume demonstrates how research on important issues relative to textbook design can advance our knowledge about what makes textbooks effective learning tools, and thus inform policymakers, publishers, and those involved in textbook selection. Representing pure and applied approaches, researchers present papers on the quality of writing, the role of questions, the role of pictures and illustrations, and the role of auxiliary materials in the design of effective textbooks. The chapters provide insight into research and its application to textbook design and improvement -- stimulating others to follow this lead.
