archaeology textbooks: Archaeology: The Basics Brian M. Fagan, Nadia Durrani, 2022-02-07 Archaeology: The Basics, rewritten for this fourth edition, is a short, engaging book that takes the reader on a journey through the fascinating world of archaeology and archaeologists. Written in a non-technical style by two experienced archaeologists and writers about the past, the book begins by introducing archaeology as a unique way of studying the entire span of the human past from our origins some six million years ago to today. The authors stress that archaeology is a global study of human biological and cultural diversity. After a brief look at early archaeological discoveries, they introduce today's multidisciplinary archaeology. Then they go on to describe the archaeological record, the archives of the past and the importance of contexts of time and space. How do we find

archaeological sites and how do we explore them? Two chapters laced with examples examine these questions. Later chapters describe ancient technologies and how we study them, and the all-important subject of changing ancient environments and climate change. Zooarchaeology, flotation methods, and other ways of reconstructing ancient diet and subsistence lead us into the study of changing settlement patterns across the landscape. Next, they visit the people of the past, either as individuals or groups, calling on bioarchaeology to assist them. Two chapters discuss ancient culture change and the remarkable diversity of ancient societies, and they are followed by an exploration of the spiritual realm, the exploration of the intangible. The final chapter looks at the importance of archaeology in today's world. Rich in numerous examples and contemporary thinking about archaeology, this book tries to answer an important question: What does archaeology tell us about ourselves? archaeology textbooks: Environmental Archaeology: Meaning and Purpose Umberto Albarella, 2013-04-17 Despite the fact that the human life of the past cannot be understood without taking into account its ecological relationships, environmental studies are often marginalised in archaeology. This is the first book that, by discussing the meaning and purpose we give to the expression 'environmental archaeology', investigates the reasons for such a problem. This is achieved through the use of theoretical considerations and the aid of a number of case studies, which, by taking us from Anglo-Saxon England to pre-Columbian Venezuela, and from Classical Greece to late Antique Egypt, emphasise the potential of an integrated approach. The book is written by archaeologists with different backgrounds and is addressed to all researchers who care about the past relationship between people and the rest of Nature. Despite the complexity of some of the issues tackled, the book is written in an accessible manner and should be of interest to all students who want to understand the essence of archaeology beyond the boundary of the individual sub-disciplines.
