consumer math textbooks for high school: Educating the Consumer-citizen Joel Spring, 2003-05-14 In *Educating the Consumer-Citizen: A History of the Marriage of Schools, Advertising, and Media*, Joel Spring charts the rise of consumerism as the dominant American ideology of the 21st century. He documents and analyzes how, from the early 19th century through the present, the combined endeavors of schools, advertising, and media have led to the creation of a consumerist ideology and ensured its central place in American life and global culture. Spring first defines consumerist ideology and consumer-citizen and explores their 19th-century origins in schools, children's literature, the commercialization of American cities, advertising, newspapers, and the development of department stores. He then traces the rise of consumerist ideology in the 20th century by looking closely at: the impact of the home economics profession on the education of women as consumers and the development of an American cuisine based on packaged and processed foods; the influence of advertising images of sports heroes, cowboys, and the clean-shaven businessman in shaping male identity; the outcomes of the growth of the high school as a mass institution on the development of teenage consumer markets; the consequences of commercial radio and television joining with the schools to educate a consumer-oriented population so that, by the 1950s, consumerist images were tied to the Cold War and presented as the American way of life in both media and schools; the effects of the civil rights movement on integrating previously excluded groups into the consumer society; the changes the women's movement demanded in textbooks, school curricula, media, and advertising that led to a new image of women in the consumer market; and the ascent of fast food education. Spring carries the story into the 21st century by examining the evolving marriage of schools, advertising, and media and its ongoing role in educating the consumer-citizen and creating an integrated consumer market. This book will be of wide interest to scholars, professionals, and students across foundations of education, history and sociology of education, educational policy, mass communications, American history, and cultural studies. It is highly appropriate as a text for courses in these areas.

In August 2000, following the Ninth International Congress on Mathematics Education (ICME-9) in Makuhari, Japan, MSEB and USNCMI capitalized on the presence of mathematics educators in attendance from the United States and Japan by holding a two and a half-day workshop on the professional development of mathematics teachers. This workshop used the expertise of the participants from the two countries to develop a better, more flexible, and more useful understanding of the knowledge that is needed to teach well and how to help teachers to obtain this knowledge. A major focus of the workshop was to discuss teachers' opportunities in

both societies-using teaching practice as a medium for professional development. Another focus of the workshop addressed practice by considering the records of teaching, including videos of classroom lessons and cases describing teachers and their work. These proceedings reflect the activities and discussion of the workshop using both print and video to enable others to share in their experience
