forensic textbooks: *Forensic Criminology* Wayne Petherick, Brent E. Turvey, Claire E. Ferguson, 2009-07-30 *Forensic Criminology* gives students of criminology and criminal justice an introduction to the forensic realm and the applied forensic issues they will face when working cases within the justice system. It effectively bridges the theoretical world of social criminology with the applied world of the criminal justice system. While most of the competing textbooks on criminology adequately address the application and the social theory to the criminal justice system, the vast majority do not include casework or real-world issues that criminologists face. This book focuses on navigating casework in forensic contexts by case-working criminologists, rather than broad social theory. It also allows criminology/criminal justice instructors outside of the forensic sciences the ability to develop and instruct a core course that might otherwise be considered beyond their expertise, or in conflict with forensic courses taught in chemistry, biology, or medical programs at their institutions because of its focus on criminology and criminal justice careers. With its practical approach, this textbook is well-suited for forensic criminology subjects being taught and developed in law, criminology, and criminal justice programs around the world. - Approaches the study of criminology from an applied standpoint, moving away from the purely theoretical - Contains relevant and contemporary case examples to demonstrate the application of forensic criminology - Provides an integrated philosophy with respect to criminology, forensic casework, criminal investigations, and the law - Useful for students and professionals in the area of criminology, criminal justice, criminal investigation, forensic science, and the law

The book utilizes an ongoing fictional narrative throughout, entertaining students as it provides hands-on learning in order to crack the case. As two investigators try to solve a missing persons case, each succeeding chapter reveals new characters, new information, and new physical evidence to be processed. A full range of topics are covered, including processing the crime scene, lifting prints, trace and blood evidence, DNA and mtDNA sequencing, ballistics, skeletal remains, and court testimony. Following the storyline, students are introduced to the appropriate science necessary to process the physical evidence, including math, physics, chemistry, and biology. The final element of each chapter includes a series of cost-effective, field-tested lab activities that train students in processing, analyzing, and documenting the physical evidence revealed in the narrative.
