franciscan university of steubenville textbooks: Modern Principles of Economics Tyler Cowen, Alex Tabarrok, 2009-10-09 From the authors:See the Invisible Hand. Understand Your World. That's the tagline of Modern Principles and our teaching philosophy. Nobel laureate Vernon Smith put it this way: At the heart of economics is a scientific mystery... a scientific mystery as deep,

fundamental and inspiring as that of the expanding universe or the forces that bind matter... How is order produced from freedom of choice? We want students to be inspired by this mystery and by how economists have begun to solve it. Thus, we show how markets interconnect and respond in surprising ways to changes in resources and preferences. Consider, for example, how markets respond to a reduction in the supply of oil. Of course, the price of oil increases giving consumers an incentive to use less and suppliers an incentive to discover more. But an increase in the price of oil also encourages Brazilian sugar cane farmers to devote more of their production to ethanol and less to sugar thereby driving up the price of sugar. An increase in the price of sugar means a reduction in the quantity of candy demanded. So one way the market responds to a reduction in the supply of oil is by encouraging consumers to eat less candy! In analyses like this, we teach students to see the invisible hand and in so doing to understand their world. Similarly, we offer a unique and simple proof of the amazing invisible hand theorem that without any central direction competitive markets allocate production across firms in a way that minimizes aggregate costs! To understand their world students must understand when self-interest promotes the social interest and when it does not. Thus, *Modern Principles* has in-depth analyses of externalities, public goods, and ethical issues with market incomes and trade. Moreover, we always discuss economic theory in the context of real world problems such as the decline of the ocean fisheries, climate change, and the shortage of human organs for transplant.

franciscan university of steubenville textbooks: *Creation* Christopher T. Baglow, McGrath Institute for Church Life, 2021-11-05 Was creation a fantastic series of actions by God that long ago set the universe in motion? Or is creation an eternal flowing forth from God that even now causes all things to exist? Christopher Baglow, director of the Science and Religion Initiative at the University of Notre Dame, writes from within the deep well of Catholic tradition and his personal love of both science and faith to provide probing yet lively and often-humorous answers to the foundational questions of human existence. Christian doctrine sees creation not as a one-time event but rather as an eternal outpouring of divine merciful love. In *Creation: A Catholic's Guide to God and the Universe*, Baglow explores how the doctrine of creation addresses the why of the universe, making it perfectly open to science, which helps us to answer how the universe came to be and continues to exist. He weaves the lessons of scripture, the Church's long tradition of scientific inquiry and theological development, and cultural icons such as Douglas Adams's *The Hitchhiker's Guide to the Galaxy* and the inhabitants of C. S. Lewis's *Narnia* series to create a concise and spirited guide for Catholics wanting to better understand the doctrine of creation without abandoning what science teaches us. Baglow helps to neutralize the unnecessary conflict between faith and science that often runs rampant among people of faith. He provides an excellent guide for curious Catholics, and an expert resource for teachers in Catholic schools, parish leaders, campus ministers, and RCIA teams, helping those exploring foundational questions of faith dive into the meaning of creation and what it tells us about who God is, who we are, and how we are to live.
