Overview of IB Biology Curriculum

The IB Biology curriculum is designed to provide students with a strong foundation in biological concepts and principles. The syllabus covers a wide range of topics, including cell biology, genetics, ecology, evolution, and human physiology. Students are expected to develop analytical and practical skills through laboratory work, which is an essential part of the IB program. The curriculum is structured into core topics, additional higher-level topics, and options that students can choose based on their interests.

In addition to theoretical knowledge, the curriculum emphasizes the development of critical thinking and scientific inquiry skills. Students engage in experiments and projects that help them apply their knowledge in real-world contexts. The assessment is based on internal assessments, exams, and practical work, making it vital for students to have access to high-quality textbooks that align with these requirements.
