must have medical textbooks: Indexing Books, Second Edition Nancy C. Mulvany, 2009-11-15 Since 1994, Nancy Mulvany's *Indexing Books* has been the gold standard for thousands of professional indexers, editors, and authors. This long-awaited second edition, expanded and completely updated, will be equally revered. Like its predecessor, this edition of *Indexing Books* offers comprehensive, reliable treatment of indexing principles and practices relevant to authors and indexers alike. In addition to practical advice, the book presents a big-picture perspective on the nature and purpose of indexes and their role in published works. New to this edition are discussions of information overload and the role of the index, open-system versus closed-system indexing, electronic submission and display of indexes, and trends in software development, among other topics. Mulvany is equally comfortable focusing on the nuts and bolts of indexing—how to determine what is indexable, how to decide the depth of an index, and how to work with publisher instructions—and broadly surveying important sources of indexing guidelines such as *The Chicago Manual of Style*, Sun Microsystems, Oxford University Press, NISO TR03, and ISO 999. Authors will appreciate Mulvany's in-depth consideration of the costs and benefits of preparing one's own index versus hiring a professional, while professional indexers will value Mulvany's insights into computer-aided indexing. Helpful appendixes include resources for indexers, a worksheet for general index specifications, and a bibliography of sources to consult for further information on a range of topics. *Indexing Books* is both a practical guide and a manifesto about the vital role of the human-crafted index in the Information Age. As the standard indexing reference, it belongs on the shelves of everyone involved in writing and publishing nonfiction books.

A contented feeling passed through his body, as the beginning of his plan advanced without a hassle. The top scientists in the world are baffled-and they can't stop it. This nightmarish scenario becomes reality in the year 2241. The remnants of the biological catastrophe caused by FS Syndrome have created a world where any type of intimacy is strictly prohibited. It is here that Susan 170 and Bob 162, two very different people, fall in love with each other. Follow their saga as they attempt the unthinkable possibility of a physical relationship and as they are pursued by two ruthless, unrelenting police officers out to protect society by destroying them. Can the compass of life determine the future of these individuals and this world?
