neonatology textbooks: HADI PRACTICAL NEONATOLOGY BOOK 1 ABDELHADI ABDELGABBAR ABDELHADI, 2024-01-24 Hadi Practical Neonatology, a 2-book series of practical guidelines, is intended to provide a structured approach to the management of neonatal conditions which are likely to face the neonatal team. It is not intended to replace textbooks or to teach the beginners in the field. Prior sound knowledge of Neonatal Medicine, by the user, is essential. This book is the first in the series. It covers aspects of RESUSCITATION, THERMAL CONTROL- RESPIRATORY-CARDIOVASCULAR-INFECTIONS- ENDOCRINE & METABOLIC-GASTROINTESTINAL & NUTRITION- DERMATOLOGY- and SURGICAL NEWBORN challenges. It is my belief that neonatal doctors and nurses are an integrated team, and any demarcation is an imaginary line. The recipe of creating a backbone of good nurses is passionate support, continuous education, and practical teaching at every possible opportunity. Mutual trust and appropriate delegations are crucial to the success of the team. HADI PN series is written for the neonatal team and not just for the medical staff. The best way for consolidating the team knowledge and experience is bedside teaching. New methods and approaches of neonatal management are progressing but seem to slow down over the last few years. This may reflect the fact neonatal advances are approaching our era peak of "what is possible." Nevertheless, many of our current practices are yet to be scrutinized to fulfil the evidence-based standards. There is no robust verification of the evidence behind our current practice of many routine day to day applications. This include but not limited to fluid requirements, duration of antibiotics courses, use of various blood products, seizures pharmacological treatment, and safe PaCO₂ levels. I have reviewed multiple medical and nursing guidelines from Europe, North America, and Australia as well as Asia, South America, and Africa. I integrated many of these guidelines within this book whenever they are in accord with the international acceptable practices. Feedback and suggestions are welcome and can be sent to neonatologypractical@gmail.com The book is an updated version of the protocols and guidelines which I have developed during my work as Consultant Neonatologist. Some are adopted from various reputable institutes and modified to reflect the current evidence plus a slight flavour of my experience. Considerable effort has been exercised to ensure the doses of medications given in HADI PN are accurate. However, further confirmation by the nursing and medical staff is advised prior to the first use of each medication. HADI PN reflects the author's own acceptable and safe practice and advice. It is written with the intention of facilitating the delivery of care to the most vulnerable newborn. The publication is written bearing in mind the wide variations in the skill mix of neonatal practitioners, nurses, and doctors. Likewise, the chall

neonatology textbooks: Oxford Textbook of the Newborn Michael Obladen, 2021-08-11 Well into the 20th century, one in four newborns failed to survive their first year of life. It was after World War II that medicine discovered the newborn as a human being entitled to medical treatment and prioritised care. Since its definition by Alexander Schaffer in 1960, neonatology has evolved into a mature, innovative, and ethical field. A large number of medical professionals' care for neonates, yet no definitive medical history of the newborn has been available until now. The Oxford Textbook of the Newborn: A Cultural and Medical History offers readers a unique and authoritative resource on the 3000-year history of the newborn within Western societies. Written by Professor Michael Obladen, a leading voice in neonatology, this book reflects on our perception of newborns, from the earliest days of human thought, through to the traces that remained in medieval life and persist today. It unearths ideas and evidence of societies' perceptions of newborns through a beautifully illustrated, impressive and often never-seen-before set of historical sources from libraries, archives, churches, excavation fields, and hospital charts around the world. Split into 8 sections which each cover aspects of the natural lifecycle of a neonate, this book demonstrates the impact of religion, law, ethics, philosophy and culture on newborns' quality of life, and covers fascinating topics such as the rites of passage for the newborn, infanticide, opium use, breastfeeding, and artificial feeding. Each chapter is written in an accessible style and includes high-quality historical illustrations which really bring the subject to life.

neonatology textbooks: Emerging Topics and Controversies in Neonatology Elaine M. Boyle, Jonathan Cusack, 2020-02-05 This textbook addresses the themes that are at the forefront of neonatal clinical care and research, based on natural divisions in care during pregnancy, and postnatally by gestational age at birth. The book offers a unique approach, in that it proposes discussion of important general principles underpinning neonatal care that are not addressed in most general neonatology textbooks, such as ethical issues, counselling, effective training methods, quality and safety, among other subjects. These are fundamental aspects and challenges that need to be appreciated by senior clinicians. A chapter authored by parents describing their perspectives of neonatal intensive care is unique and will be highly educational, with the potential to influence the way in which individuals view and deliver neonatal care. The authors discuss common and important conditions, to promote adoption of sound evidenced based practice where this is available. However, where evidence is limited, as is the case in many areas of neonatal practice, the authors aim to encourage critical thinking and evidence appraisal, which are necessary skills for busy clinicians wishing to filter evidence to guide delivery of care. This text is suitable for senior trainees wishing to pursue a career in neonatal medicine, early career neonatologists and paediatricians with an interest in neonatology. It is also of interest to established neonatologists wishing to update their neonatal knowledge. The content is based on the RCPCH Level 3 curriculum, and addresses important topical and/or controversial aspects of neonatal care.
