textbooks for first year medical students: Psychology and Sociology Applied to Medicine

E-Book Beth Alder, Edwin van Teijlingen, Michael Porter, 2011-11-29 This textbook in the Illustrated Colour Text series offers an integrated treatment of sociology and psychology for medical students. It is presented in a much more colourful and graphic format than is usual for books on these two subjects. This integration reflects the tendency to teach these two subjects together as "behavioural science", with an increased stress on the place of medicine in society, and on illness as a product of psychological and social circumstances rather than merely a biological phenomenon. The book reflects these trends and has been successful and popular with students. An integrated treatment of psychology and sociology for medical students - in line with the trend towards teaching these subjects as "behavioural sciences". Use of case studies and Stop/Think boxes encourages critical thinking and discussion. Graphic Illustrated Colour Text presentation style enlivens a subject which most medical students are not keen on. This third edition contains a new introduction on the importance and key features of the biopsychosocial model and additional double-page spreads on International Health and Rural Health.

textbooks for first year medical students: Essentials for Practice of Medicine in the Frontline Inyang Ukot, 2021-09-03 Essentials for practice of medicine in the frontline is an abridged synthesis of selected topics from family medicine, internal medicine, pediatrics, obstetrics and gynecology, pathology, and psychiatry; also, ophthalmology, otorhinolaryngology, hematology, and dermatology. Each section covers ten salient and commonly-encountered areas of practice by physicians. Multiple-choice questions and answers accompany each Section. The setting of writing is a developing country. The contents are relevant to doctors who practice in the medically advanced countries and those in the developing countries. Medically, the world has become an interesting place. Air travel, frequent movement, and resettlement of people now mean that doctors in developed countries can no longer stay and practice within the clinical conditions that were typical in their practice settings. Things have changed, as they cannot be certain of what medical conditions that patients from various parts of the world will present to them. Doctors also cannot be unequivocal that an emergency in a distant part of the globe may not require their attention. This book therefore meets the needs of doctors, irrespective of their length of practice or where they practice. What applies to doctors certainly applies to medical students. This book is an atypical book as it puts in its two volumes of less than 500 pages of 8.5"x 11" per volume material that any doctor, anywhere, should keep on their office or consulting room bookshelf. The e-book version is also a veritable companion.
