savvas textbooks: Building Services Design for Energy Efficient Buildings Paul Tymkow, Savvas Tassou, Maria Kolokotroni, Hussam Jouhara, 2020-07-12 The role and influence of building services engineers are undergoing rapid change and are pivotal to achieving low-carbon buildings. However, textbooks in the field have tended to remain fairly traditional with a detailed focus on the technicalities of heating, ventilation and air conditioning (HVAC) systems, often with little wider context. This book addresses that need by embracing a contemporary understanding of the urgent challenge to address climate change, together with practical approaches to energy efficiency and carbon mitigation for mechanical and electrical systems, in a concise manner. The essential conceptual design issues for planning the principal building services systems that influence energy efficiency are examined in detail. These are HVAC and electrical systems. In addition, the following issues are addressed: background issues on climate change, whole-life performance and design collaboration generic strategies for energy efficient, low-carbon design health and wellbeing and post occupancy evaluation building ventilation air conditioning and HVAC system selection thermal energy generation and distribution systems low-energy approaches for thermal control electrical systems, data collection, controls and monitoring building thermal load assessment building electric power load assessment space planning and design integration with other disciplines. In order to deliver buildings that help mitigate climate change impacts, a new perspective is required for building services engineers, from the initial conceptual design and throughout the design collaboration with other disciplines. This book provides a contemporary introduction and guide to this new approach, for students and practitioners alike.

savvas textbooks: Evolutionary Political Economy in Action Hardy Hanappi, Savvas Katsikides, Manuel Scholz-Wäckerle, 2017-01-06 The world is in turmoil, the dynamics of political economy seem to have entered a phase where a 'return to normal' cannot be expected. Since the financial crisis, conventional economic theory has proven itself to be rather helpless and political decision makers have become suspicious about this type of economic consultancy. This book offers a different approach. It promises to describe political and economic dynamics as interwoven as they are in real life and it adds to that an evolutionary perspective. The latter allows for a long-run view, which makes it possible to discuss the emergence and exit of social institutions. Evolutionary Political Economy in Action consists of two parts. Part I provides a broad range of issues that show how flexible evolutionary political economy can handle acute policy problems in Europe: should Europe support the revived build-up of NATO forces on its Eastern border, or should it rather aim at economic cooperation with Russia? How can democracy for a whole continent be reasonably further developed; what is the role of economies of scope? Do the new protest movements against inequality provide alternatives? What could a vision for a unified, socioecological Europe look like? Part II takes a closer look at Cyprus and Greece, where the problems of the financial crisis have been exacerbated by the 'solutions' imposed on them by the troika. In all of these essays, the authors demonstrate the unique insights which can be garnered from adopting an evolutionary political economy approach and consider the real solutions that such an approach points towards. This volume is extremely useful for social scientists in the fields of economics, politics and sociology who are interested to learn what evolutionary political economy is, how it proceeds and what it can provide.
