The framework distinguishes between five approaches: national studies, citizenship education studies, cultural studies, postcolonial studies and transnational studies. In a series of concrete analyses, the book illustrates how one can describe and uncover representations of the world in textbooks for English, German, French, Spanish, Danish and Esperanto. Each analysis is accompanied by suggestions of possible supplements and changes. The book points to the need for language learning materials to deal seriously with knowledge about the world, including its diversities and problems.

textbooks grade 7: Nation, Region and History in Post-Communist Transitions Peter W

Rodgers, 2012-05-25 Since independence in 1991, issues of nation and identity have become highly debated topics in Ukraine. This monograph explores not only how national identity is being (re)constructed by the Ukrainian state, but also the processes by which it is negotiated through society. The central argument of this work is that too much attention, concerning identity in Ukraine, has focused on markers of ethnicity and language. Instead, the author advocates a regional approach, engaging with the issue of how Ukraine's regional differences affect nation-building processes. Following the tumultuous events of the 'Orange Revolution', the view of Ukraine as a country inherently 'divided' between 'East' and 'West' has (re)emerged to become a popular explanation for political events. The study outlines the necessity for academics, policymakers and indeed politicians to veer away from this simplistic 'West versus East' divide. The book advocates an analysis of Ukraine's unique brand of regionalism not in terms of divisions, but in terms of regional differences and diversity. The author deconstructs the concept of 'Eastern Ukraine' by focusing on three Ukrainian localities, all adjacent to the Ukrainian-Russian border. The study examines how individuals provide 'their' own understanding of the place of their region within the wider processes of nation building across Ukraine. In doing so, the book develops a 'regional' approach to the study of identity politics in Ukraine.

textbooks grade 7: Imagining Japan in Post-war East Asia Paul Morris, Naoko Shimazu, Edward Vickers, 2014-03-26 In the decades since her defeat in the Second World War, Japan has continued to loom large in the national imagination of many of her East Asian neighbours. While for many, Japan still conjures up images of rampant military brutality, at different times and in different communities, alternative images of the Japanese 'Other' have vied for predominance - in ways that remain poorly understood, not least within Japan itself. *Imagining Japan in Postwar East Asia* analyses the portrayal of Japan in the societies of East and Southeast Asia, and asks how and why this has changed in recent decades, and what these changing images of Japan reveal about the ways in which these societies construct their own identities. It examines the role played by an imagined 'Japan' in the construction of national selves across the East Asian region, as mediated through a broad range of media ranging from school curricula and textbooks to film, television, literature and comics. Commencing with an extensive thematic and comparative overview chapter, the volume also includes contributions focusing specifically on Chinese societies (the mainland PRC, Hong Kong and Taiwan), Korea, the Philippines, Malaysia and Singapore. These studies show how changes in the representation of Japan have been related to political, social and cultural shifts within the societies of East Asia - and in particular to the ways in which these societies have imagined or constructed their own identities. Bringing together contributors working in the fields of education, anthropology, history, sociology, political science and media studies, this interdisciplinary volume will be of interest to all students and scholars concerned with issues of identity, politics and culture in the societies of East Asia, and to those seeking a deeper understanding of Japan's fraught relations with its regional neighbours.

textbooks grade 7: Research on Mathematics Textbooks and Teachers' Resources

Lianghuo Fan, Luc Trouche, Chunxia Qi, Sebastian Rezat, Jana Visnovska, 2018-02-13 This book focuses on issues related to mathematics teaching and learning resources, including mathematics textbooks, teacher guides, student learning and assessment materials, and online resources. The book highlights various theoretical and methodological approaches used to study teaching and learning resources, and addresses the areas of resources, teachers, and students at an international level. As for the resources, the book examines the role textbooks and other curricular or learning resources play in mathematics teaching, learning, and assessment. It asks questions such as: Could we consider different types of textbooks and roles they play in teaching and learning? How does the digitalization of information and communication affect these roles? What are defining features of e-textbooks, and how could we characterize the differences between the traditional textbooks and e-textbooks? As for the teachers, the book discusses the relationships between teachers' individual and collective resources, and the way in which we could model such relationships. Specific questions addressed are: What is the role of teachers in developing textbooks and other teaching and learning materials? What are the relationships between resource designers and users? What are the consequences of these changing roles and relationships for the teaching of mathematics, and for teacher knowledge and professional development? As for the students, the book explores how students, as well as their teachers, interact through resources. It raises and addresses questions such as: What are the effects of modern ICT (particularly internet) on students' use and the design of resources? How do changing patterns of use and design affect student behaviour, learning, and relationships to the subject of mathematics?

textbooks grade 7: Language, Education and Uyghur Identity in Urban Xinjiang

Joanne Smith Finley, Xiaowei Zang, 2015-10-30 As the regional lingua franca, the Uyghur language long underpinned Uyghur national identity in Xinjiang. However, since the 'bilingual education' policy was introduced in 2002, Chinese has been rapidly institutionalised as the sole medium of instruction in the region's institutes of education. As a result, studies of the bilingual and indeed multi-lingual Uyghur urban youth have emerged as a major new research trend. This book explores the relationship between language, education and identity among the urban Uyghurs of contemporary Xinjiang. It considers ways in which Uyghur urban youth identities began to evolve in response to the state imposition of 'bilingual education'. Starting by defining the notion of ethnic identity, the book explores the processes involved in the formation and development of personal and group identities, considers why ethnic boundaries are constructed between groups, and questions how ethnic identity is expressed in social, cultural and religious practice. Against this background, contributors adopt a special focus on the relationship between language use, education and ethnic identity development. As a study of ethnicity in China this book will be of huge interest to students and scholars of Chinese culture and society, Asian ethnicity, cultural anthropology, sociolinguistics and Asian education.

textbooks grade 7: International Handbook of Research on Multicultural Science

Education Mary M. Atwater, 2022-06-30 This handbook gathers in one volume the major research and scholarship related to multicultural science education that has developed since the field was named and established by Atwater in 1993. Culture is defined in this handbook as an integrated

pattern of shared values, beliefs, languages, worldviews, behaviors, artifacts, knowledge, and social and political relationships of a group of people in a particular place or time that the people use to understand or make meaning of their world, each other, and other groups of people and to transmit these to succeeding generations. The research studies include both different kinds of qualitative and quantitative studies. The chapters in this volume reflect differing ideas about culture and its impact on science learning and teaching in different K-14 contexts and policy issues. Research findings about groups that are underrepresented in STEM in the United States, and in other countries related to language issues and indigenous knowledge are included in this volume.

textbooks grade 7: *The Psychology of Illustration* Harvey A. Houghton, Dale M. Willows, 2012-12-06 From the earliest stages of elementary school to the advanced college level, various types of illustrations are included in educational materials in order to promote learning. These illustrative adjuncts are often profuse and, in many cases, they may be the most striking feature that distinguishes one set of learning materials from another. In addition, the perceived effectiveness of the illustrations clearly plays an important role in the marketing of many educational materials. Despite this pervasiveness and salience in education, there has never been a systematic effort to bring together the results of research on illustrations in order to provide some level of guidance to the developers of commercial learning materials. There is, however, a considerable research literature that is directly relevant to this aspect of education. The purpose of the present two volume set is to summarize and interpret the existing research literature that deals with the various educational functions of illustrations. In undertaking to produce an omnibus reference work on psychological and instructional issues surrounding illustrated learning material, our paramount aim has been to stimulate closer collaboration between researchers, producers, and users of educational text. The problems associated with moving the findings of educational research into the realm of everyday practice have been perennial ones. While many researchers and practitioners are interested in fundamentally similar questions, they typically speak dissimilar languages, read different journals, and carry out their work under disparate ideologies.
