Levi, 2020-03-27 Goodman's Neurosurgery Oral Board Review educates and prepares neurosurgery candidates who are studying for the Neurosurgery Oral Board exam, the final step prior to board certification. It also serves as a primer for the Goodman oral board course, a bi-annual course sponsored by the AANS. The book begins by initially describing the format of the oral board exam. It then examines some of the concepts and techniques in the question-answer process that forms the major premise of the oral board exam. Each chapter contains 4-7 case presentations, which are organized similarly to how oral board questions are presented, with a brief history / physical and relevant imaging studies. The authors provide detailed analysis of these cases, as well as key references for each case with the salient conclusions from each referenced paper. While there are a few books that cover the board exams, none of them are specifically designed as case-based resources for oral board exam preparation. Goodman's Neurosurgery Oral Board Review focuses specifically on the oral board exam, and has been updated for this new edition to reflect the most recent (post-2017) style board. This review is an ideal resource for neurosurgeons who are preparing for the oral board, and is also very appropriate for those who are trying to maintain competence in neurosurgery.

textbooks request portal: **Transforming Acquisitions and Collection Services** Michelle Flinchbaugh, Chuck Thomas, Rob Tench, 2019-09-15 This book explores ways in which libraries can reach new levels of service, quality, and efficiency while minimizing cost by collaborating in acquisitions. In consortial acquisitions, a number of libraries work together, usually in an existing library consortia, to leverage size to support acquisitions in each individual library. In cross-functional acquisitions, acquisitions collaborates to support other library functions. For the library acquisitions manager, technical services manager, or the library director, awareness of different options for effective consortial and cross-functional acquisitions allows for the optimization of staff and resources to reach goals. This work presents those options in the form of case studies as well as useful analysis of the benefits and challenges of each. By supporting each other's acquisitions services in a consortium, libraries leverage size to get better prices, and share systems and expertise to maximize resources while minimizing costs. Within libraries, the acquisitions function can be combined with other library functions in a unit with more than one purpose, or acquisitions can develop a close working relationship with another unit to support their work. This book surveys practice at different libraries and at different library consortia, and presents a detailed description and analysis of a variety of practices for how acquisitions units support each other within a consortium, and how they work with other library units, specifically collection management, cataloging, interlibrary loan, and the digital repository, in the form of case studies. A final section of

the book covers fundamentals of collaboration.

A consequence of the discussed themes there are two directions which should be done in the next years. One direction is obvious. The tools must be improved and research and development work should be extended to all groups of handicapped (even if they are numerically not so large as for instance the blind or visually handicapped persons). On the other side in the area of social implications there is an increasing demand on social science studies on overall computer use among disabled persons. Because sources are in principle missing today about disabled persons work tasks, research in this field must begin by trying to survey this aspect. Particular attention should be paid to the extent and character of computer use among the handicapped in work life. There are a lot of questions, which should be answered during the next years for reaching the aim of rehabilitation." Fifteen years later the 9th International Conference on Computers Helping People with Special Needs (Paris, 2004) offered a comprehensive and deepened view on general awareness, special research and individual applications concerning disabled people and their participation in our society.

This book shows how European theological libraries tackled these challenges; how they survived by redefining their task, by participating in the renewal of scholarly librarianship, and by networking internationally. Since 1972, BETH, the Association of European Theological Libraries, has stimulated this process by enabling contacts among a growing number of national library associations all over Europe.

textbooks request portal: *War, Nation, Memory* Keith A. Crawford, Stuart J. Foster, 2007-12-01 The Second World War stands as the most devastating and destructive global conflict in human history. More than 60 nations representing 1.7 billion people or three quarters of the world's population were consumed by its horror. Not surprisingly, therefore, World War II stands as a landmark episode in history education throughout the world and its prominent place in school history textbooks is almost guaranteed. As this book demonstrates, however, the stories that nations choose to tell their young about World War II do not represent a universally accepted "truth" about events during the war. Rather, wartime narratives contained in school textbooks typically are selected to instil in the young a sense of national pride, common identity, and shared collective memory. To understand this process War, Nation, Memory describes and evaluates school history textbooks from many nations deeply affected by World War II including China, France, Germany, Japan, USA, and the United Kingdom. It critically examines the very different and complex perspectives offered in many nations and analyses the ways in which textbooks commonly serve as instruments of socialisation and, in some cases, propaganda. Above all, War, Nation, Memory demonstrates that far from containing "neutral" knowledge, history textbooks prove fascinating cultural artefacts consciously shaped and legitimated by powerful ideological, cultural, and sociopolitical forces dominant in the present.
