textbooks stock image: Reading Images for Knowledge Building J.R. Martin, Len Unsworth, 2023-08-07 This innovative volume provides a new analytic framework for understanding how meaning-making resources are deployed in images designed for knowledge building in school science. The framework enables analyses of science images from the perspectives of both their complexity and recognizability. Complexity deals with the technical and abstract knowledge of school science (technicality), evaluative dispositions in relation to that knowledge (iconization) and the condensation of the technical and dispositional meanings as 'synoptic eye-fuls' in discipline-specific infographics (aggregation). Recognizability concerns the relationship between the appearance of phenomena in reality and the reconfiguration of this reality in images (congruence), the perceptibility or discernibility of the features and contexts of phenomena in images (explicitness), and how images engage their viewers (affiliation). The framework is illustrated by more than 100 images in colour in the e-book and black and white in the paper version and will inform research into multimodal literacy pedagogy that incorporates an understanding of the role of images in the teaching and learning of school science. This book will be of particular interest to scholars in multimodality, semiotics, literacy education and science education.

textbooks stock image: Environment, Media and Communication Anders Hansen, 2010-03-02 Communication about 'the environment' in and through a broad array of news, advertising, art and entertainment media is one of the major sources of public and political understanding of definitions, issues and problems associated with the environment. Environment, Media and Communication examines the social, cultural and political roles of the media as a public arena for images, representations, definitions and controversy regarding the environment. The book starts by discussing and outlining a framework for analyzing media and communication roles in the emergence of the environment and environmental problems as issues for public and political concern. It proceeds to examine who and what drives the public agenda on environmental issues, addressing questions about how governments, scientists, experts, pressure groups and other stakeholders have sought to use traditional as well as newer media for promoting their definitions of the key issues. The media are not merely an open public arena or stage, but rather themselves a key gate-keeper and influence in the process of communicating about the environment: the role of news values, organizational arrangements and professional practices, are thus examined next. Recognizing the importance of wider popular culture narratives to public understanding and communication about the environment and nature, the book proceeds with a discussion of the messages and moral tales communicated about the environment, science and nature in a range of media, including film and advertising media. It shows how this wider context provides important clues to understanding the successes and failures of selected environmental issues or campaigns. The book finishes with an examination of the key approaches and models used for understanding how the media influence and interact with public opinion and political decision-making on environmental issues. Offering a comprehensive introduction to theoretical approaches and models for the study of media and communication roles regarding the environment, and drawing on empirical research evidence and examples from Europe, America, Australia and Asia, the book will be of interest to students in media/communication studies, geography, environmental studies, political science and sociology as well as to environmental professionals and activists.

textbooks stock image: Weight Bias in Health Education Heather A Brown, Nancy Ellis-Ordway, 2021-09-30 Weight stigma is so pervasive in our culture that it is often unnoticed, along with the harm that it causes. Health care is rife with anti-fat bias and discrimination against fat people, which compromises care and influences the training of new practitioners. This book explores how this happens and how we can change it. This interdisciplinary volume is grounded in a framework that challenges the dominant discourse that health in fat individuals must be improved through weight loss. The first part explores the negative impacts of bias, discrimination, and other harms by health care providers against fat individuals. The second part addresses how we can 'fatten' pedagogy for current and future health care providers, discussing how we can address anti-fat bias in education for health professionals and how alternative frameworks, such as Health at Every Size, can be successfully incorporated into training so that health outcomes for fat people improve. Examining what works and what fails in teaching health care providers to truly care for the health of fat individuals without further stigmatizing them or harming them, this book is for scholars and practitioners with an interest in fat studies and health education from a range of backgrounds, including medicine, nursing, social work, nutrition, physiotherapy, psychology, sociology, education and gender studies.
