best math workbooks for elementary school: A Blacklist Education Jane S. Smith, 2025-07-15 In A Blacklist Education, a mysterious file of family papers triggers a journey through the dark days of political purges in the 1950s. Jane S. Smith tells the story of the anticommunist witch hunt that sent shockwaves through New York City's public schools as more than a thousand teachers were targeted by Board of Education investigators. Her father was one of them—a fact she learned only long after his death. Beginning in 1949, amid widespread panic about supposed communist subversion, investigators questioned teachers in their homes, accosted them in their classrooms, and ordered them to report to individual hearings. The interrogations were not published, filmed, open to the public, or reported in the news. By 1956, hundreds of New York City teachers had been fired, often because of uncorroborated reports from paid informers or anonymous accusers. Most of the targeted teachers resigned or retired without any public process, their names recorded only in municipal files and their futures never known. Their absence became the invisible outline of an educational void, a narrowing of thought that pervaded classrooms for decades. In this highly personal story, family lore and childhood memory lead to restricted archives, forgotten inquisitions, and an eerily contemporary campaign to control who could teach and what was acceptable for students to learn.

best math workbooks for elementary school: *Unschoolled* Kerry McDonald, Peter Gray, 2019-05-07 Education has become synonymous with schooling, but it doesn't have to be. As schooling becomes increasingly standardized and test driven, occupying more of childhood than ever before, parents and educators are questioning the role of schooling in society. Many are now exploring and creating alternatives. In a compelling narrative that introduces historical and contemporary research on self-directed education, *Unschoolled* also spotlights how a diverse group of individuals and organizations are evolving an old schooling model of education. These innovators challenge the myth that children need to be taught in order to learn. They are parents who saw firsthand how schooling can dull children's natural curiosity and exuberance and others who decided early on to enable their children to learn without school. Educators who left public school classrooms discuss launching self-directed learning centers to allow young people's innate learning instincts to flourish, and entrepreneurs explore their disillusionment with the teach-and-test approach of traditional schooling.
