homeschool workbooks 7th grade: *The Homeschooling Parent Teaches MATH!* Kerridwen Mangala McNamara, 2023-11-10 We all worry about our kids learning math. Even if the kids are in school, there's always a concern. Sometimes it's about the kid's concern... sometimes it's about their teacher's concern (parent-teacher or otherwise). But a lot of the time it's about US. It's about our own math-phobias - those 'fears, dislikes, or aversions' that we picked up from our own math experiences and that we inadvertently pass on to our kids. We don't want them to be afraid of math - we know that limits their opportunities and makes their lives harder and costs them more money - but we just can't help it. This book is here to help you deal with your own math-phobias and come to - if not outright enjoy math, to at least appreciate it and be able to convey it to your kids without passing on the fear. Kerridwen Mangala McNamara is NOT a 'math-lover' but she is a math-appreciator and has worked through most of these issues herself. Let her help you along your homeschooling journey and show you how to fight the Fear-of-Math monster so that it no longer intimidates you - or your kids!

homeschool workbooks 7th grade: *The Well-Trained Mind* Susan Wise Bauer, Jessie Wise, 2016-08-09 Is your child getting lost in the system, becoming bored, losing his or her natural eagerness to learn? If so, it may be time to take charge of your child's education—by doing it yourself. The Well-Trained Mind will instruct you, step by step, on how to give your child an academically rigorous, comprehensive education from preschool through high school—one that will train him or her to read, to think, to understand, to be well-rounded and curious about learning. Veteran home educators Susan Wise Bauer and Jessie Wise outline the classical pattern of education called the trivium, which organizes learning around the maturing capacity of the child's mind and comprises three stages: the elementary school "grammar stage," when the building blocks of information are absorbed through memorization and rules; the middle school "logic stage," in which

the student begins to think more analytically; and the high-school “rhetoric stage,” where the student learns to write and speak with force and originality. Using this theory as your model, you’ll be able to instruct your child—whether full-time or as a supplement to classroom education—in all levels of reading, writing, history, geography, mathematics, science, foreign languages, rhetoric, logic, art, and music, regardless of your own aptitude in those subjects. Thousands of parents and teachers have already used the detailed book lists and methods described in *The Well-Trained Mind* to create a truly superior education for the children in their care. This extensively revised fourth edition contains completely updated curricula and book lists, links to an entirely new set of online resources, new material on teaching children with learning challenges, cutting-edge math and sciences recommendations, answers to common questions about home education, and advice on practical matters such as standardized testing, working with your local school board, designing a high-school program, preparing transcripts, and applying to colleges. You do have control over what and how your child learns. *The Well-Trained Mind* will give you the tools you’ll need to teach your child with confidence and success.

More importantly than degrees though, Mr. Bertoch's students are successful! On average they score 20% higher than their peers on standardized tests. Everything You Need For Science Grades 5 - 8 This curriculum includes everything you need to help your students become scientists. The goal of this curriculum is not to memorize a bunch of scientific facts, though we do this. Rather, the goal is to assimilate into the sciences. To learn to think critically. To demand evidence. To make decisions using data. To justify opinions with facts. To become a scientist. Your student will have unlimited free access to over 20 hours of instructional videos (via QR code) where Mr. Bertoch will teach them in all aspects of science. They will complete more than 120 hands-on labs. They will have unlimited free access to articles on each topic (via QR code) that amount to more than 150,000 words. They will have unlimited access to hundreds of online quizzes (via QR code), and everything else they need for success. Curriculum Is Based on Next Generation Science Standards The NGSS are utilized by most states in the United States. They are designed to help your student become a scientist rather than to just memorize science facts. Mr. Bertoch sat on and participated in various boards on the state and national level that helped to forge these standards. He has also trained hundreds of teachers on the state and district level in the use of these

standards. Crosscutting Concepts & The Eight Science And Engineering Practices This curriculum utilizes and refers back to the crosscutting concepts and eight science and engineering practices outlined in the NGSS standards.
