**How can I generate a self-signed SSL certificate using OpenSSL?** The commands below and the configuration file create a self-signed certificate (it also shows you how to create a signing request). They differ from other answers in one respect: the DNS

**Difference between 'cls' and 'self' in Python classes?** Why is cls sometimes used instead of self as an argument in Python classes? For example: class Person: def \_\_init\_\_(self, firstname, lastname): self.firstname = firstname self

**Why do I get "TypeError: Missing 1 required positional argument:** Another possibility in the neighborhood of this answer is if you declare a method as an @staticmethod and then include (or retain) self as the first positional argument
