self help workbooks on mental health: Self-Help in Mental Health T. Mark Harwood, Luciano L'Abate, 2009-11-24 Self-help is big business, but alas not a scientific business. The estimated 10 billion—that's with a "b"—spent each year on self-help in the United States is rarely guided by research or monitored by mental health professionals. Instead, marketing and metaphysics triumph. The more outrageous the "miraculous cure" and the "revolutionary secret," the better the sales. Of the 3,000 plus self-help books published each year, only a dozen contain controlled research documenting their effectiveness as stand-alone self-help. Of the 20,000 plus psychological and relationship web sites available on the Internet, only a couple hundred meet professional standards for accuracy and balance. Most, in fact, sell a commercial product. Pity the layperson, or for that matter, the practitioner, trying to navigate the self-help morass. We are bombarded with thousands of potential resources and contradictory advice. Should we seek wisdom in a self-help book, an online

site, a 12-step group, an engaging autobiography, a treatment manual, an inspiring movie, or distance writing? Should we just do it, or just say no? Work toward change or accept what is? Love your inner child or grow out of your Peter Pan? I become confused and discouraged just contemplating the choices.

self help workbooks on mental health: Low-Cost Approaches to Promote Physical and Mental Health Luciano L'Abate, 2007-06-06 Most physical and mental health professionals will agree that their time, space, and funds are generally in short supply, even under optimal conditions. Their participants (clients or patients), too, will admit to similar deficits of time and patience, even with optimal motivation. Overburdened mental health facilities are trying to cope with limited budgets and overworked and underpaid personnel. *Low-Cost Approaches to Promote Physical and Mental Health* addresses both sides of this shortfall by offering either self-administered or easily administered verbal and non-verbal interventions designed to promote positive health behaviors while requiring little or no outside funding. Editor Luciano L'Abate continues his long tradition of prolific innovations by identifying major changes in today's health care systems and explaining how targeted, prescriptive promotion/prevention strategies can enhance traditional primary, secondary, and tertiary interventions in key behavioral and relational areas: - Nutrition: weight/obesity control, diets, meal planning, vitamins and minerals, herbal supplements - Exercise, expressive movement, relaxation, meditation, and mindfulness - Writing for mental health promotion, from structured protocols/workbooks to less structured focused, expressive, and guided writing, including diaries and autobiographies - Sex, sexuality, affection, intimacy and fear of intimacy - Mother/child bonding as well as couple and family togetherness - Spirituality and forgiveness in dealing with inevitable life hurts and disappointments - Friendships and support groups - Plus leading-edge interventions, including emotional intelligence, animal companionship, and computer technology Reviews of each promotional approach are engaging, effective, and consistent with standard psychological practice for lasting results, either away from or in addition to non-clinical and clinical settings (schools, hospitals, senior citizen centers, etc.). L'Abate and his fifty colleagues have designed a future-oriented sourcebook for mental and public health professionals who want to maximize their resources—and those of their participants.
