workbookscom: Career Counseling Larry Cochran, 1997-04-08 For decades, scholars and professionals have been attracted to theories offering a deeper view of career, but have been frustrated by difficulties in translating theories of meaning making, development, and identity into viable practice. At the same time, there has been growing disenchantment with impersonal techniques of matching an individual's traits with skills required for a specific vocation. While personality traits and talents may help to predict a predisposition to a career type, this method of analysis neglects the influences of human purpose, passion, and life history. In Career Counseling, author Larry Cochran fills the void by introducing the theory of narrative construction, a method of counseling that injects personal identity into career development in a practical way. Cochran demonstrates how literary models and constructivist methods can be used in career development to provide the essential subjective dimension that has been lacking in practical counseling. In addition, he provides the innovative materials that are necessary for making this process both efficient and effective. Contributing a unique and important perspective and approach to career counseling, this volume will be widely used by scholars and professionals in the fields of career counseling, clinical/counseling psychology, social psychology, and management.

workbookscom: Logic And Declarative Language M. Downward, 2004-01-14 Logic has acquired a reputation for difficulty, perhaps because many of the approaches adopted have been more suitable for mathematicians than computer scientists. This book shows that the subject is not inherently difficult and that the connections between logic and declarative language are straightforward. Many exercises have been included in the hope that these will lead to a much greater confidence in manual proofs, therefore leading to a greater confidence in automated proofs.

workbookscom: *Human Resource (Talent) Development* Ronald R. Sims, 2023-01-01 The rapidly transforming environment that we live in has made human resource development (HRD) all the more necessary for the success of today's organizations. HRD initiatives help their organizations by developing employees who assist their organizations in not only surviving, but thriving in our increasingly global world. Today's best practice or benchmarked organizations and their HRD professionals continue to recognize the importance of employee learning, knowledge, skills and motivation to organizational success. This recognition increasingly opens many doors as organizational leaders accept the fact that HRD initiatives can be used to ensure that organization members have what it takes to successfully meet the demands that confront them and their organizations. This book takes the position that HRD can demonstrate how their initiatives help to develop a superior workforce so that the organization and its individual employees can accomplish their strategic and operational goals in service to their clients or customers. This book is written with the belief that HRD professionals have many opportunities to learn, change and find ways both in and outside of the workplace to contribute to the development of learning organizations as we move further into the 21st century. A major point of this book is that HRD will continue to become more and more important to organizational success when one considers the increased responsibilities HRD professionals have taken on during and post- the COVID pandemic. The primary audience for this book is practicing HRM and HRD professionals, and other organizational leaders. The book provides proven ideas important to demonstrating the value of HRD. From a practical viewpoint, it is based on actual experience, a strong research base, and accepted practices presented in an easy to read form. A second target audience is students of HRD and HRM who are preparing for careers in this important field. This book will help them develop a solid foundation to the study of HRD practices or initiatives that are key to HRD success regardless of the type of organization. A third target audience is managers or leaders at all levels of an organization who are expected to take on a number of HRD responsibilities (e.g., as trainers, coaches, mentors, change agents, and so on) while regularly partnering with HRD professionals. It offers these individuals a firsthand look at what they should expect of their HRD functions or areas and how they can effectively work with HRD professionals in their organizations to achieve the organizations strategic goals by getting the most out of its human people.

workbookscom: Learning Styles Judith Campbell Reiff, 1992 This monograph reviews several approaches for describing learning styles and the instructional implications of an emphasis on learning styles for teachers. Several reasons for the importance of understanding individual learning styles are provided; such understanding leads to: (1) reduction of teacher and student frustration; (2) higher student achievement and an improved self-concept; (3) accommodation of a variety of learners in a classroom; (4) the versatility that is crucial to learning; and (5) improved communication with administrators, parents, counselors, and other staff. Cognitive, affective, and physiological learning styles are considered. Approaches for describing cognitive styles include brain theories, conceptual tempo, field dependence/field independence, mind styles, modalities, and multiple intelligences. Approaches for describing affective styles include conceptual systems theory and psychological types. Finally, approaches for describing physiological styles revolve around elements of learning styles which have been classified into four kinds of stimuli: environmental, emotional, sociological, and physical. Six approaches for incorporating instruction that takes learning styles into account in the classroom are provided. They are: (1) pedagogical intelligence; (2) Carol Hall's Living Classroom; (3) whole language; (4) Foxfire activities; (5) the 4MAT System; and (6) the DICSIE (Describe, Interact, Control, Select, Instruct, Evaluate) Model. It is concluded that teachers pass through several stages in their understanding of children's learning styles, and it is emphasized that administrative support, staff development, peer coaching, parent education, and personal determination and commitment are crucial in a positive learning styles classroom. A bibliography of 172 references is appended. (GLR)
